

Toshiba launched a series of cheap laptops from VND 6.4 million

The B40 and C40 models are priced at less than 8.2 million dong while the L40 series mid-range models have the highest price of about 14.5 million dong.

The B40 and C40 models are priced at less than 8.2 million dong while the L40 series mid-range models have the highest price of about 14.5 million dong.

Toshiba C40.

After launching the first model equipped with Haswell processor chip, Toshiba this month continues to market the series of computers in the cheap segment. Similar to every year, this is the time when the low-end segment receives the most attention by students who are about to enter the new school year.

The cheapest of the newly launched models is the **Toshiba B40-A100E series** with 14-inch HD screen resolution. The device has enough configuration for simple or office needs including Celeron 1005M processor with speed of 1.9 GHz, 2 GB DDR3 RAM, 500 GB hard drive. Notably, this product has both USB 3.0, HDMI and full Bluetooth ports. Reference price is **VND 6.3 million**.

A little more expensive is the two C series models including **C40-111 and C-50A100E** 14 and 15.6 inch screens and corresponding HD resolutions. Both machines have 2 GB RAM, 500 GB hard drive as well as USB 3.0 port, HDMI, VGA. 14-inch screen version using Intel Core i3-2348M chip with 2.3 GHz speed costs **8.2 million** while the 15.6-inch version using Pentium Dual 2020M chip with 2.4 GHz speed costs **7.3 million dong**.

In addition to the two cheap models mentioned above, Toshiba also launched mid-range models at a price of slightly more than **10 million dong** , the **L40** series with three configuration options. Also with 14-inch HD resolution screen, but L40 has up to 4 GB RAM, two USB 3.0 ports, a USB port with charging feature when the machine is turned off, Onkyo speaker system, 2-year warranty and weight 1 , 95 kg.2

Toshiba L40.

The cheapest version costs **VND 10.3 million** using Core i3-3227U chip clocked at 1.9 GHz. The remaining two versions of **L40** all use 1.8-GHz Core i5-333U chip, but the model has 2GB Nvidia N14P-GV2 VRAM graphics card for **14.5 million dong** while the version doesn't cost **12.5 million. copper**.

The above prices do not include VAT.
