Quarantine isolates suspicious files, allowing you to review and restore them if needed - however, it lacks advanced security features like a firewall .

It includes web protection tools to block phishing attempts and block access to malicious websites. The built-in Safe Browsing feature analyzes URLs before they load and warns you of potential security risks. This helps reduce your exposure to fake login pages and fraudulent online services. It also scans downloaded files for threats before they run. However, web protection is limited to browser-based threats, unlike Norton 360 Deluxe or Bitdefender Total Security.
