

Tricks to let smartphones automatically send messages, create virtual calls

TipsMake - Sometimes you need to send a message at a specific time but fear that you will forget to do it in time. The application below will help you schedule your smartphone to automatically do this.

You remember that there are only a few days left for the birthday of a close friend, but fear that on that day will forget to send a message to congratulate that person. Or you want to send a message to wish you happy birthday, happy new year at 0 o'clock on a special day, but you are afraid that you will not catch the moment.

An application called Do It Later will be a great help in this case.

Do It Later is a free application that allows users to schedule a time for smartphones to automatically send messages, emails, and status to Twitter at a chosen time. Users just need to draft the text of the message (email), select the recipient address, then schedule the application to automatically perform.

In particular, Do It Later also allows users to schedule to make virtual phone calls. At the right time, the application will automatically create a call to your own smartphone, this will help users withdraw from awkward situations such as a boring meeting or a drinking party. you don't want to join .

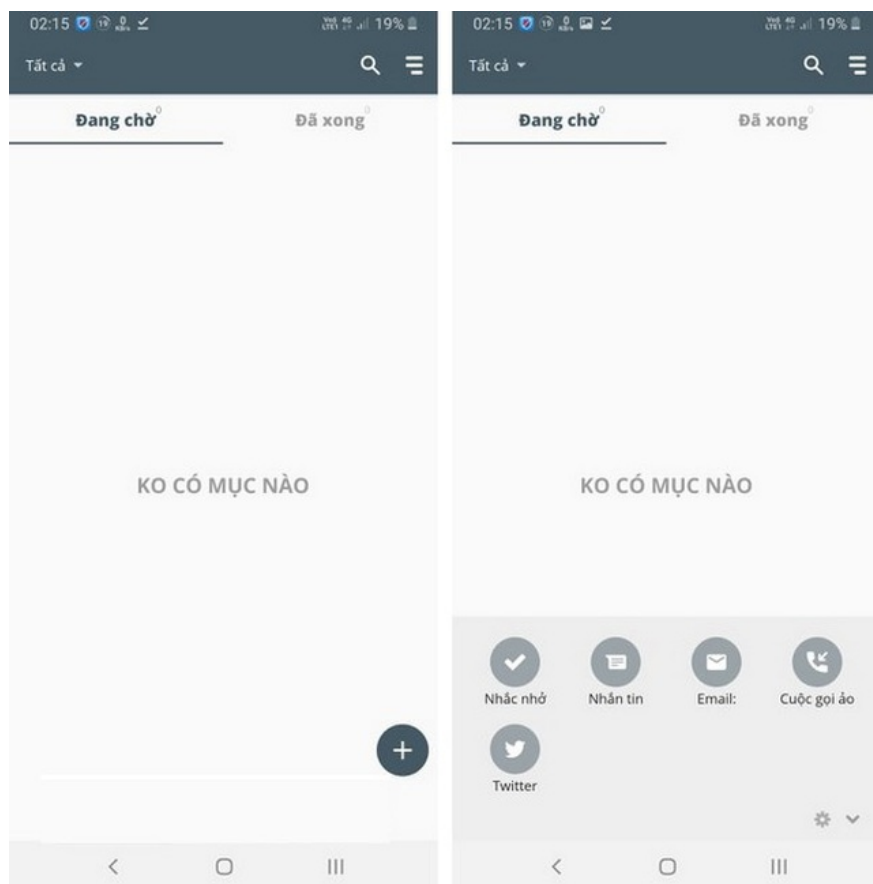

Download the free app here

<https://play.google.com/store/apps/details?id=com.hnib.smlater>

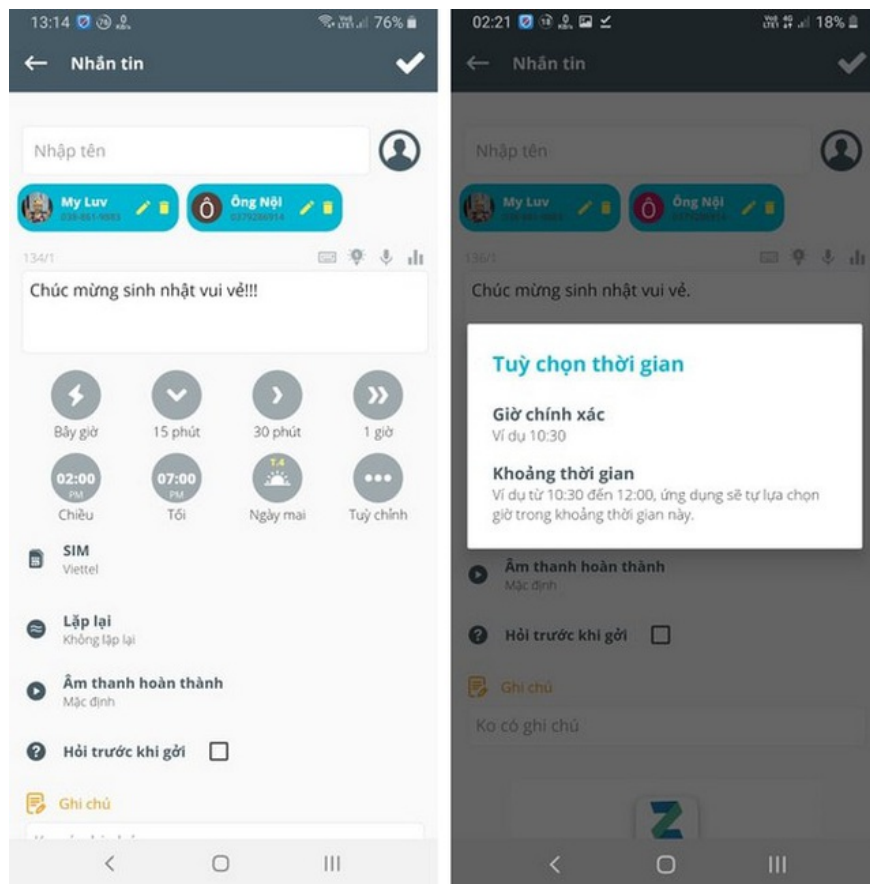

The main interface of the application is entirely in Vietnamese so very easy and convenient to use.

Press the '+' button from the application interface to start the timer to automatically send messages, email or make a virtual call .

For example, here you need to schedule the application to automatically send a happy birthday message tomorrow, click on the '+' icon and select 'Messaging' from the dialog box that appears.

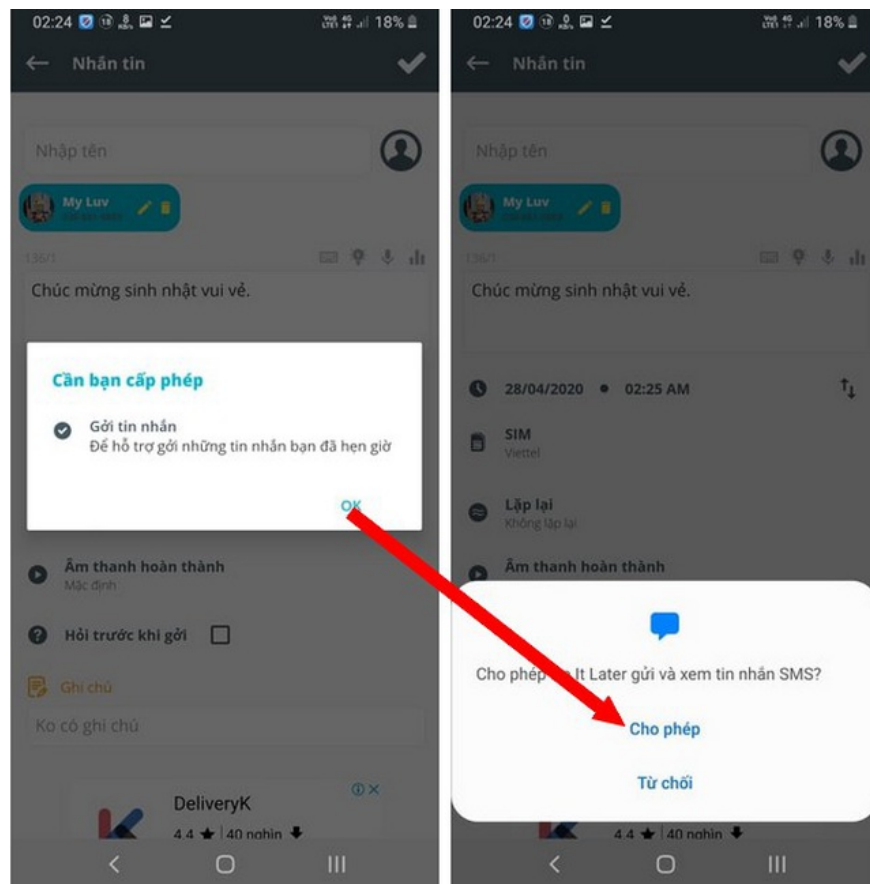

In the next interface, you enter the phone number of the recipient (you can select multiple recipients from the phonebook at the same time), enter the text of the message to send, then select the time the message will be sent. You can select 'Customize' to set the appropriate time and date for sending messages.

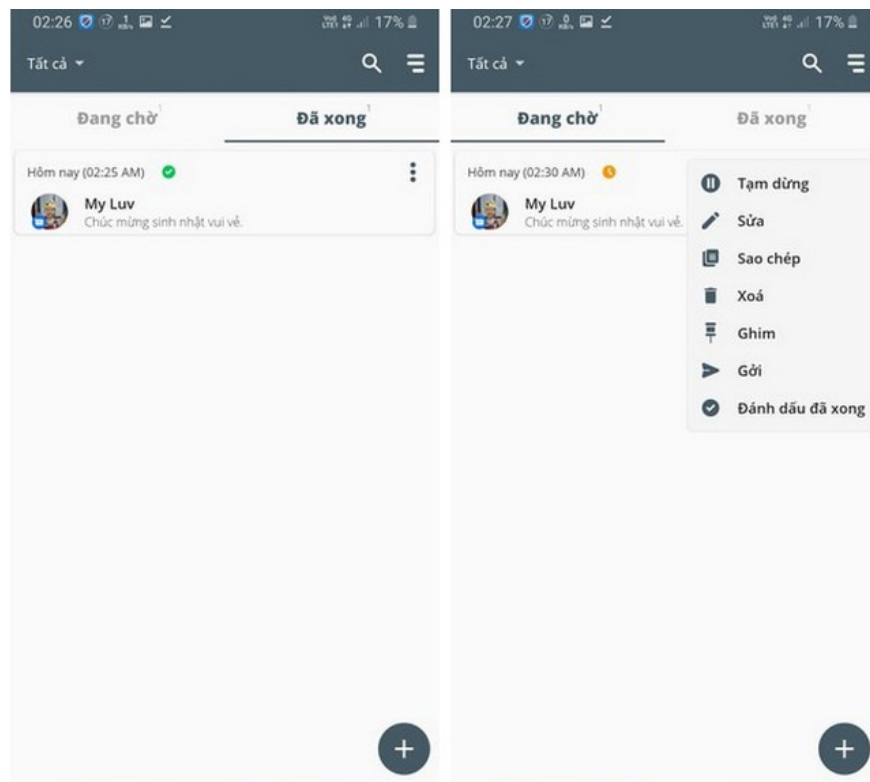

Finally, click the checkmark in the upper right corner to save the settings. At this point, a dialog box will appear asking you to give the application permission to send the message at the scheduled time. Here, click the 'OK' button then select 'Allow' from the dialog box that appears.

Note: the steps to authorize a messaging application only need to be done once.

The list of pending messages will be displayed in the 'Pending' tab on the main interface of the application. Sent messages will appear in the 'Done' tab. When the message is sent, the application will also notify the user known.

In case you want to cancel a scheduled message, click the 3-dot icon at the message in the waiting list, then select 'Delete' to cancel this message.

You should try scheduling sending a draft message to ensure the application works well before deciding to schedule an appointment to send birthday messages or other important messages.

Schedule a virtual call to your smartphone

Do It Later also comes with a pretty useful feature that allows you to make virtual calls to your smartphone. This is essentially a virtual phone call created by the application, but to outsiders will be like having someone calling you.

The feature will be necessary in case you need to get rid of a certain situation, such as a boring meeting or want to withdraw from a party . you can set a timer for Do It Later to create a meeting. Make a virtual call, like someone is calling and you can get an excuse to withdraw after pretending to hear this virtual call.

To do this, click the '+' sign on the main interface of Do It Later, then select 'Virtual calls' from the menu that appears.

Next, you enter the name and phone number of the caller to display on the virtual call interface. You can enter any name and phone number, it is not required to be accurate information because this is just a virtual call made by the application, not a real call.
