

Twitter refreshes the mobile web-like interface

Twitter recently updated its web version with the same interface design as the mobile device application. The most noticeable change is the black navigation bar, where the previous buttons like Home, Connect, Discover, and Me were replaced with a brighter white bar.

Twitter recently updated its web version with the same interface design as the mobile device application. The most noticeable change is the black navigation bar, where the previous buttons like Home, Connect, Discover, and Me were replaced with a brighter white bar.

Icons are also redone by Twitter with a single color and do not apply shadow effects as before. The frame shows the number of people you follow and the number you are following is also refreshed with green, clearer, easier to see numbers. Today's update helps bring the Twitter app on iOS, Android and web background closer together and becomes more consistent throughout most platforms that users can experience this social network. The new interface is currently being offered gradually to users around the globe.
