

Ubuntu is about to have a new logo, starting from 22.04 LTS update

Canonical has just revealed the first details about the new Ubuntu logo design, which is expected to be applied starting with the next Long-Term Support update coming out in April.

This is the third time the Ubuntu logo has been refreshed since the platform was officially launched in 2004. And according to Canonical, the new logo will be a highlight that speaks to a modern, youthful style that is not afraid to change like exactly the spirit that Ubuntu is aiming for.

In addition to the static design, Canonical has also released a new animation effect for this logo, as can be seen in the video description below.

The new Ubuntu logo was designed by engineer Marcus Haslam, the same creator of the current Ubuntu logo. Explaining the process of creating his new logo, Haslam said:

'13 years have passed, as it is now, it has been a long and serious process to achieve remarkable results. Our core values ??have not changed then and have not changed now. Ubuntu will become a more modern platform, but still maintain the core values ??that have made it so successful today. That spirit is reflected in this new logo template.

As planned, the new logo will be officially adopted by Canonical starting with the latest Ubuntu 22.04 LTS release, which is scheduled to be released on April 21. This is a long-term support release, and will be supported. support for 5 consecutive years until April 2027.
