Toshiba Portégé Z10t.

After revealing the prototype earlier this month, Toshiba today **officially launched** a new ultrabook model of the **Portégé** line, **Z10t**. This is also the first model in the series that has a screen size of only 11.6 inches. Previously, the Z820 or Z930 generations all had 13-inch screens. Not only that, the new product also has resolutions up to 1,920 x 1,080 pixels and supports touch.

The Toshiba Portégé Z10t has Intel Core i3, i5 and i7 processor options. Despite using low voltage, this product line is expected to have a battery life all day like the new Intel Atom chip. However, with the special

dock included, users can use it in the same time.

The interesting point and also the strongest point of the product is the removable keyboard dock with many features. These include full-size keyboard with backlight, touchpad, USB port, VGA, HDMI and extension LAN. Backup battery packs are also included in this component.

Meanwhile, in the body of the tablet, the manufacturer also has a USB 3.0 port, HDMI port, microSD card slot. Wireless connections include standard Wi-Fi and Bluetooth 4.0. Other options include UMTS modem or Intel WiDI wireless signaling technology.

Price of the product has not been disclosed.
