Today (April 15), the world's leading security solutions provider - Symantec has officially announced its strategy to help businesses solve data recovery and system challenges in the shortest time. .

This strategy includes an optimal set of solutions to address customer recovery challenges such as:

- **Symantec System Recovery** provides comprehensive system recovery in seconds, even for asynchronous hardware, physical architecture, remote locations or virtualized environments, aimed at Minimize time to stop in business.
- **Symantec Backup Exec solution** eliminates backups and enables customers to meet recovery point targets through the ability to effectively restore physical and virtualized environments effectively.
- **Symantec ApplicationHA solution** allows automatic monitoring and recovery of virtualization applications running on VMware environment.

According to Symantec, **Symantec System Recovery 2011** , also known as **Backup Exec System Recovery**, is now available, with many new features that are effective for both physical and virtual environments.

These solutions help businesses shorten the recovery time with many new features, such as the ability to convert USB devices into recovery disks, as well as additional flexibility for the guiding feature (wizard) create customized recovery discs, according to Raymond Goh, technical director for Symantec in South Asia.

This is really an effective solution to help businesses get rid of the challenges of data recovery when something goes wrong. According to a Symantec survey, the level of disaster response of small and medium enterprises (SMEs) in 2011 shows that most SMEs are still not prepared to deal with the disaster, up to 54% of SME customers. said he had switched to another provider because the old supplier's computer system was unreliable.

Meanwhile, Symantec's 2010 disaster recovery survey conducted with business organizations shows that the time needed to recover incidents often lasts twice as much as the estimated time of the business. This makes many businesses lose customers and are very expensive to recover.
