

Unexpected uses of laptop webcams

Webcam is an indispensable part of laptops and desktops with a series of online video chat software such as Skype, Google Hangouts, Facebook ... However, webcams are not only tools for chatting. Your video, it can also do many other interesting things that make you surprised.

Today Webcam is an indispensable part of laptops and desktops with a series of online video chat software such as Skype, Google Hangouts, Facebook . However, webcams are not just tools to serve demand your video chat, it can also do many other interesting things that make you surprised. In the article below, join the Network Administrator to learn about the interesting features of the webcam.

Gaming:

If you are a **Sony Playstation** fan because it allows you to issue commands to make in-game moves with the wireless sensor bar, you can also do this with the webcam. At *Newgrounds.com* website, there is a collection of fast games using webcams. As simple as the *3D Target Shooting* game, use a webcam to determine your location and display 3D effects near your location. Also, there are some similar games like **Night of the Ninja** , **Bunny Zap** and **Dress Up Yourself** .

Home security system:

You can turn your webcam into a secure remote system. There are many software available online that can do this. For Windows users, you can install **Yawcam** from Yawcam for free or you can try the Vitamin D paid software on *vitamindinc.com* to work on both Windows and Mac.

After installation you can configure features according to your needs, it can stream live video or can set alerts or recordings when motion is detected in viewport, and great thing That is you can follow this content remotely.

Optical character recognition:

You can now convert handwriting images, from typed or printed versions to computers into word documents only with your webcam. To do this, you can use software like **Microsoft Document Imaging** , **Google Docs** and **ABBYY FineReader** online. You can also try the free **Evernote** software.

Barcode readers:

The reading of barcodes and QR codes can be easily done with your smartphone, thanks to the range of free apps. To do this on your computer, you can download and install bcWebCam, a free software from the *BCWebcam.de* website, and start scanning barcodes and QR codes. Mac users can use Evobarcode from *www.evological.com* or QuickMark from the Mac App store.

Login through face recognition:

Some computers may already have this feature preinstalled, but if you have a Windows-based computer and a webcam, you can allow logging in via face recognition easily. Go to *luxand.com* or *ananscreen.en.softonic.com* and download the free software. In the initial configuration, you register your face with software and set up automatic lock for Windows.

Create a funny effect:

If you visit the *cameroid.com* website, you can use the webcam to take funny pictures - either with different filters, distortion effects, scenes or frames. The application on this website is completely free and you do not need to install software or register an account. After taking a photo, you can save the photo on the Cameroid public library or download JPG files to your computer.

Webcam for online calling needs:

Today laptop webcams are an essential tool for users to make extremely easy online video calls. With this feature, the webcam will automatically record the image of the opposite person and then transfer it to the computer, helping you and everyone can see each other even if thousands of kilometers away. Moreover, today with social networking applications like Facebook, Zalo, Skype . you can absolutely chat for free.

Webcam helps filming and recording:

Webcams are also viewed as a video camera, recording your family's miniature, using webcams to help you store beautiful pictures with family and friends. The quality of images recorded from webcams is not bad at all, so you can use them instead of dedicated smartphones or camcorders.

Besides the above advantages, the webcam on laptop also has certain disadvantages, for example, the webcam is easy to be used by hackers to monitor and control your images. Even when combined with the built-in microphone, the hacker can both watch and hear all your actions. This is also the biggest limitation of webcams making users feel afraid when using. So, to ensure safety and security of information, you should cover your image on the webcam as well as cover the microphone.
