

# Unihertz Titans: The 'BlackBerry Passport' runs the Android operating system

Recently, Unihertz - a special smartphone brand has decided to create a new version of the Android operating system Passport called Titans.

BlackBerry Passport is a device that has been used by many BlackBerry fans worldwide, including Vietnam. However, due to operating system limitations, many users did not choose this device.

Recently, Unihertz - a special smartphone brand decided to create a new "Passport version" running Android operating system called Titans.

According to leaked information, the Unihertz Titans has the same design as the BlackBerry Passport, square, compact but equally powerful that many people remember BlackBerry's 8xxx series before. The phone is equipped with a QWERTY keyboard once reverberated for a while, the screen uses an IPS LCD panel of 4.5inch size and resolution of 1440x1440. It also impresses with its extremely large battery capacity up to 6000mAh and wireless charging support.

Titans also integrate popular technologies today such as LTE, fingerprint sensor, NFC, support 2 sim. Currently, Unihertz has not disclosed information about the processor and the memory capacity of the device.

The Unihertz Titans is priced at \$ 199 and will soon be available on Kickstarter. However, Unihertz may have trouble with copyright issues with BlackBerry, so whether or not this product can reach consumers' hands is still a question mark.

What do you think of this interesting device?

1. Reveal the real photos of Galaxy Note 10: no 3.5mm jack and Bixby button, a selfie punched camera
2. Nintendo unexpectedly launched a new version of Nintendo Switch, a constant configuration, cheap startling
