

Unique features on smartphones that you don't know yet

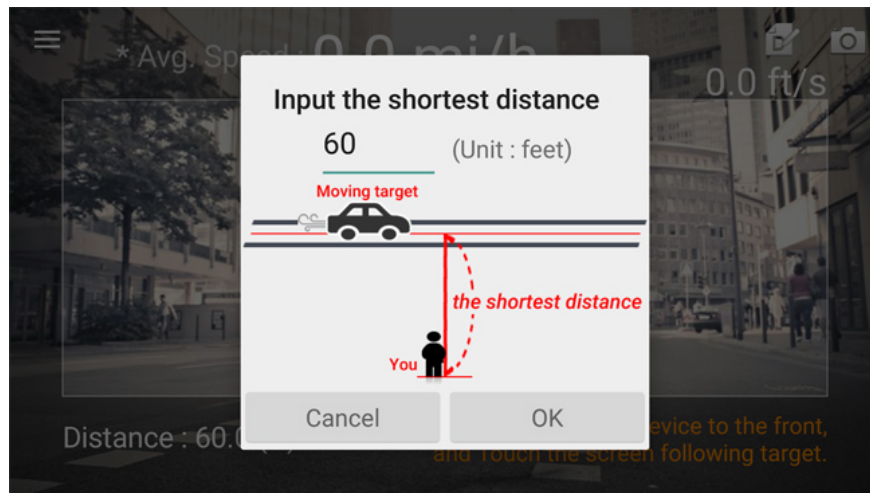

In addition to the basic features of listening, calling, messaging or surfing the web on smartphones, we can add more features with unique applications.

Listening, calling, messaging, video recording, or web surfing, etc. are very basic features of all current mobile devices. However, users can also exploit more new and unique features on their own smartphones with free applications. You can use your phone to measure the distance, control the lights in the family, or even detect camera sneaking, . Let the Network Administrator learn how to use these new features on smartphones.

1. Application to measure speed, height, distance:

For those who are planning exercises like jogging, racing or even football, baseball, Speed ??Gun or SpeedClock applications will help us to measure speed, physical distance or The statue is moving right on the phone device.

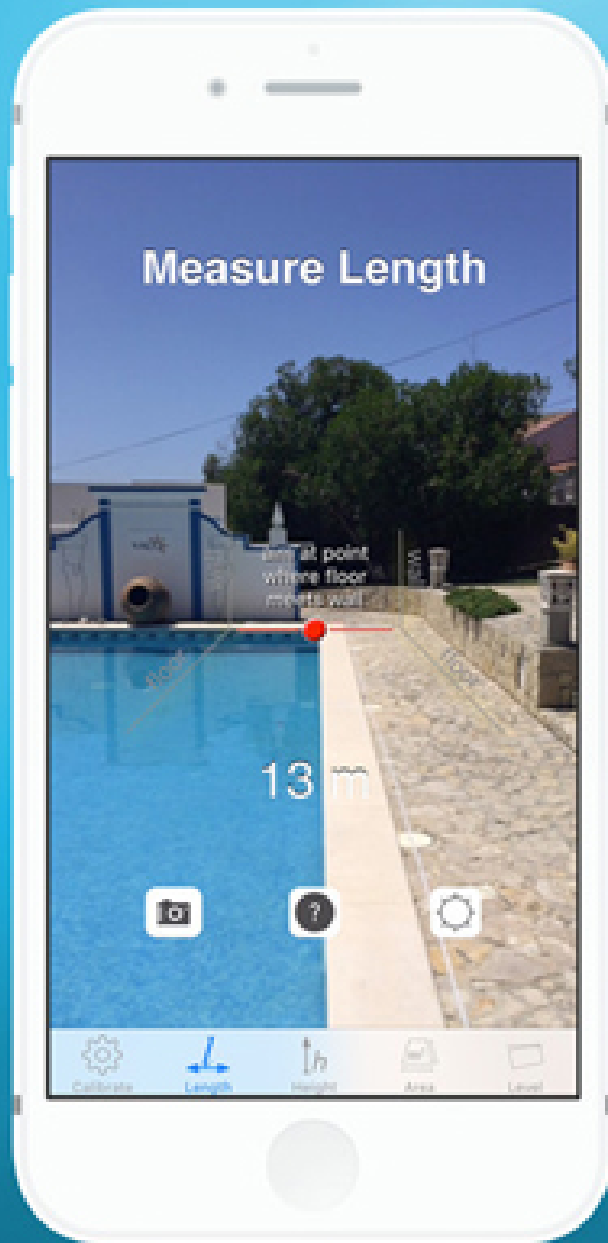

1. Download SpeedClock app for iOS
2. Download the Speed ??Gun app for Android

If you want to measure the height of an object, you can go to Smart Measure Pro or Dot Measure Pro application on Android and iOS devices.

1. Download the Dot Measure Pro app for iOS
2. Download the Smart Measure Pro app for Android

Measure Big Objects (See AppStore preview video)

2. Control indoor lights:

This feature is quite interesting for families who use smart lamps like WeMo Light Switch, Philips Hue . Each manufacturer will have the corresponding applications for their products so we can install Put on the phone, and then connect to the light bulb. Now, we just need to use the mode on the smartphone to control all lights in the

family only. That's quite convenient.

3. Share data to another device:

This feature is not new to users, when there are many applications that support us to transfer data from one device to another, from Android to Android or from iPhone to Android or vice versa. Readers can refer to some of the following articles of Network Administrator to be able to transfer data between two devices quickly.

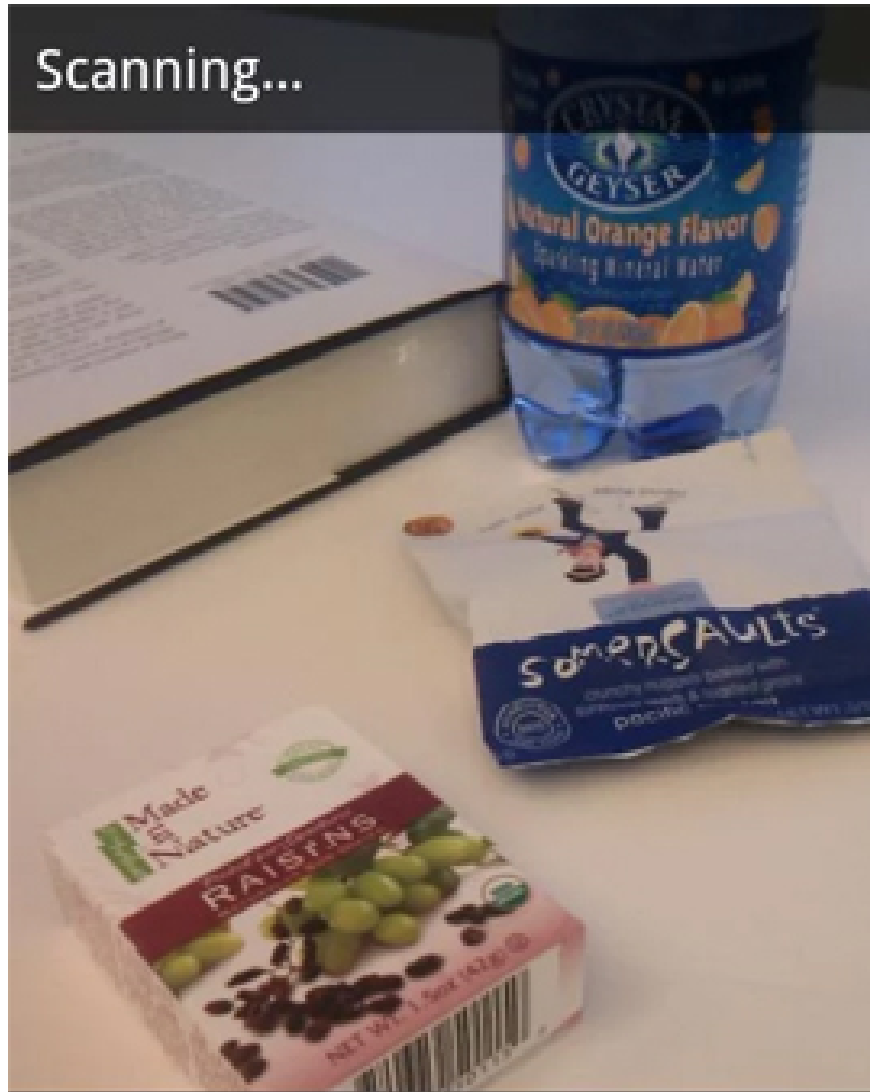

1. Simple way to transfer data from Android to iPhone
2. 3 ways to sync photos from Android to iPad or iPhone

4. Search information via images:

You need to know more information about a certain image, but it will take effort on Google. Don't worry because there's a Google Goggles app for Android devices. When we take a picture of a famous image, the application will automatically search for information via images on the Google page so readers can refer.

5. Search camera sneakily:

In order to detect infrared rays from remote TV, camera, . we need to use other specialized tools such as smartphones.

Most camera applications on smartphones are integrated with infrared lights for night use. However, we can also use this feature to detect cameras that are sneaking. You need to turn off all the lights in the room so that the infrared light of the camera will automatically activate (if any).

Then you turn the phone around the room to find the camera sneaking. If there are purple or red light spots in the camera interface, there will definitely be camera sneaking. In addition, if you want to check the TV control or air conditioner out of battery, you can also use this method.

6. Application to check heart rate with smartphone

If you want to find an application installed on your phone to check your heart rate, then you can monitor your health better anytime, anywhere, you can download Runtastic Heart Rate application for both operating systems. Android and iOS.

1. Download the Runtastic Heart Rate app for Android
2. Download Runtastic Heart Rate app for iOS
