

Upcoming Flip Phones in 2025

Major phone companies such as Samsung, Huawei and Xiaomi are actively preparing to launch flip phones with powerful configurations.

In recent years, the smartphone market has become saturated in design, causing many manufacturers to look for new solutions to differentiate themselves. Flip phones have become a popular choice, with many models appearing from major brands such as Samsung, Huawei and Xiaomi.

As early as 2025, information about new foldable phone lines has attracted consumers' attention, especially improvements that help minimize folds, equip powerful chips and better battery life.

Apple may launch a foldable iPhone soon, but not this year.

In contrast to the strong development trend of flip phones, Apple is expected to launch its first clamshell foldable phone in 2026, according to CultofMac. The move comes amid slowing iPhone sales and Apple facing increasingly fierce competition from rivals.

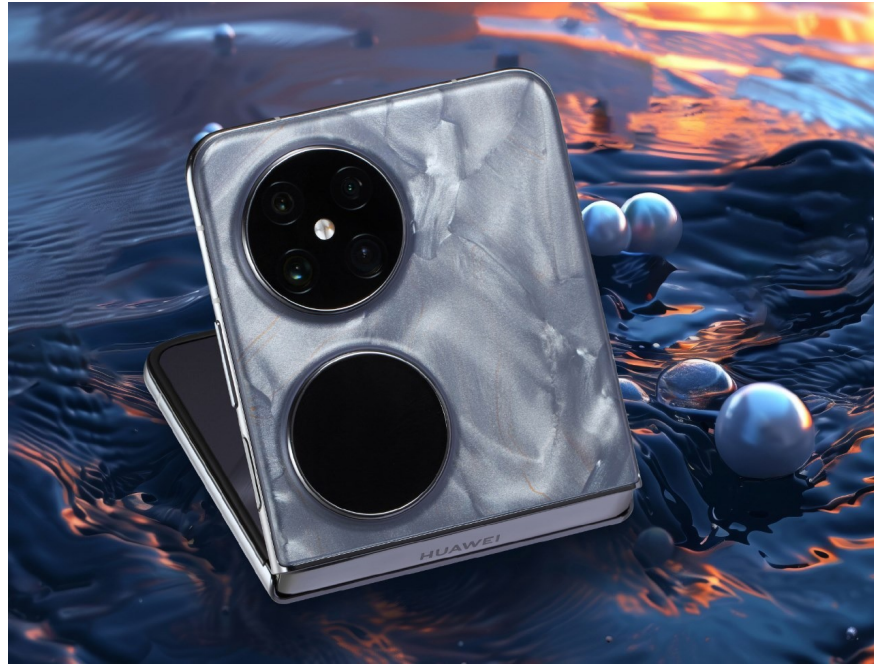

Samsung Galaxy Z Flip 7 will launch this summer.

If this information is correct, the foldable phone market this year will mainly see competition between Korean and Chinese companies. Samsung is expected to launch the Galaxy Z Flip 7 and Galaxy Z Fold 7 this summer, with many improvements in the cooling system and component durability. The Z Flip 7 is said to have a maximum screen brightness of up to 2,600 nits, but only uses the Exynos 2500 chip, while the Z Fold 7 will be equipped with the Snapdragon 8 Elite chip.

Xiaomi's Mix Flip 2 flip phone with significantly improved battery.

Xiaomi is also not out of this race with the Mix Flip 2 model, expected to launch in the second quarter of 2025. This product promises to have many valuable upgrades, including the Qualcomm Snapdragon 8 Extreme Edition chip, IPX8 water resistance and 50W wireless charging. The Mix Flip 2's camera will be equipped with a 50 megapixel ultra-wide-angle lens, along with a 5,100 mAh battery.

Huawei Pocket 3 is said to be thinner, smaller, and lighter than its predecessor.

Huawei is also preparing to launch the Pocket 3 next March, with improvements in design and technology. However, the company is having difficulty producing advanced chips due to sanctions from the United States, which may cause the Pocket 3 to continue using 7nm processors manufactured by SMIC.

Honor's Magic V Flip 2 promises more improvements.

Finally, the Honor Magic V Flip 2 is also expected to launch in the middle of this year, with battery upgrades and a thinner and lighter design than the previous generation. Although information about this product is limited, the Magic V Flip 2's battery is expected to reach 4,800 mAh, an impressive number for a compact folding phone.
