

Update Windows 10 May 2019 Update requires up to 32GB of free hard disk space when installed

On the Minimum Hardware Requirements page, Microsoft has announced the requirement for manufacturers (OEMs) to leave 32GB of memory on computer devices to update Windows 10 May 2019 Update 32-bit and 64-bit versions .

On the Minimum Hardware Requirements page, Microsoft has announced the requirement for manufacturers (OEMs) to leave 32GB of memory on computer devices to update Windows 10 May 2019 Update 32-bit and 64-bit versions . This is the minimum amount of space available for this update. With such a high capacity requirement for computer devices that have not yet been sold, perhaps the Windows 10 May 2019 Update update will soon be released and will have many new features.

For the old version 1809, the amount of free memory required on Microsoft's new computer is only 16GB for Windows 10 32bit and 20GB for 64bit version. Devices running Windows 10 IoT Enterprise version 1903 only have this minimum requirement.

Table 12: Storage size requirements for devices that run Windows 10 for desktop editions

OS architecture	OS version	Storage capacity
Windows 10, version 1809 and prior	32-bit	16 GB or greater
	64-bit	20 GB or greater
Windows 10, version 1903	32-bit and 64-bit	32 GB or greater
Windows 10 IoT Enterprise, version 1903 and prior	32-bit	16 GB or greater
	64-bit	20 GB or greater

In addition to increasing the minimum memory requirements, other criteria are still maintained by Microsoft.

Microsoft said that their request for more memory capacity to ensure the process of updating devices to Windows 10 May 2019 was stable.

Update Windows 10 May 2019 Update will be officially released at the end of May. Currently, Microsoft has released a preview version of Preview in Windows Insider.
