

Use Kaspersky Security Suite CBE 11 for free

Currently, Kaspersky Security Suite CBE security application has officially got version 11, based on the Kaspersky 2011 engine platform. This name seems quite strange to many users, but in essence, this program not much different from Kaspersky Internet Security 2011, except to change the name and time announced by ComputerBild ...

TipsMake.com - Currently, Kaspersky Security Suite CBE security application has officially got version 11, based on Kaspersky 2011 engine platform. This name seems quite strange to many users, but in essence This program is not much different from Kaspersky Internet Security 2011, except to change the name and time announced by ComputerBild. This tool is full of essential functions for users, you will feel much more secure when working, playing games or making online transactions.

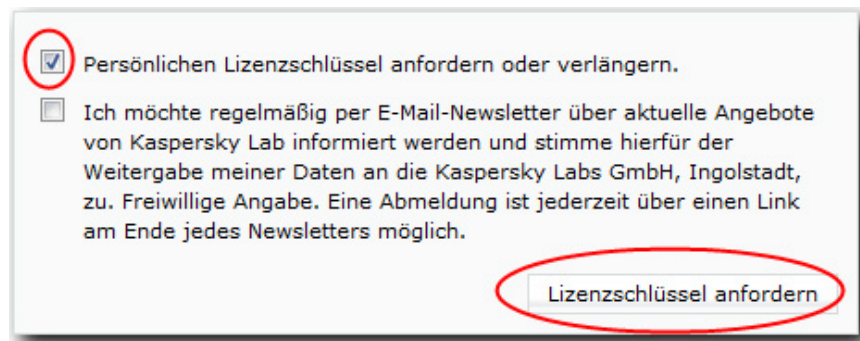

Besides changing the name, the main interface of the program also made many people surprised, because completely in German. But we can easily change this attribute by manipulating the **Registry** and **Shift + F12** to temporarily switch to familiar English. Another point to note is that you must reactivate the program every 3 months. Anyone can register an account at **ComputerBild** 's website, then request the activation code for Kaspersky **Security Suite CBE 11** , but not everyone can complete this process.

The only point in this whole thing is that the website interface is entirely in German, and most of us users are only familiar with English. So please do the following steps in turn.

- Access to this address

- If you already have a **ComputerBild** account, continue to follow the instructions there. Otherwise, choose the path **Zur Registrierung** to start registering.

- At the next screen, select the first box and click the button as shown below:

- Check the email address you just used to register. Will you receive a message from **COMPUTER BILD-Siche? Rheits-Cent? Er** with the title **Ihr Lizenzschlüssel für Kaspersky Security Suite CBE?** Write down

the activation code provided within that email.

- Continue, download the Kaspersky Security Suite CBE 11 Installer installation file from one of the links below:

HotFile

MediaFire

FileSonic

FileServe

RapidShare

FileFactory

- After completing the download, we will proceed with the installation as usual. Click the Weiter button, followed by **Akzeptieren** and **Installieren** . The next screen is displayed, you will have to activate the software with the Key code provided in the email, then press **Weiter** . When successfully activated, press **Weiter** again and finally **Beenden** .

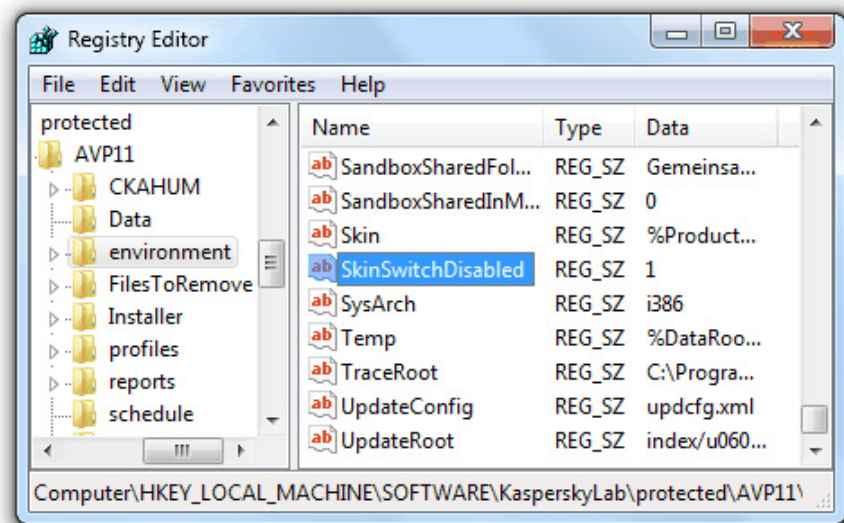

And then there's the change of the display language on the interface from German to English. Open the main monitor screen of **Kaspersky Security Suite CBE 11** , press the **Einstellungen** button at the top right corner. Follow the steps marked in order as shown below to turn off **Self - Defense** mode :

Then, open the Windows Registry (press Windows + R and type regedit), then find the following path:

HKEY_LOCAL_MACHINE\SOFTWARE\KasperskyLab\protected\AVP11\environment

Find the **SkinSwitchDisabled** key, double-click and convert **Value** from 1 to 0:

Go back to the main console of **Kaspersky Security Suite CBE 11** , press the shortcut **Shift + F12** , and you will see the display language change to familiar English. But keep in mind one thing that this works only temporarily, after restarting the computer, the program will return to German, and you just need to press the shortcut (**Shift + F12**) as above. The entire **Kaspersky Security Suite CBE 11 interface** will become English. Good luck!
