

Use Skype on iOS or Android smartphones

It can be said that in the market of applications that support voice chat and online video today, it is hard to find the 'rival' that is worthy of Skype application. Besides various functions, this software also supports many popular operating system platforms today.

It can be said that in the market of applications that support voice chat and online video today, it is hard to find the 'rival' that is worthy of Skype application. Besides various functions, this software also supports many popular operating system platforms today.

In the following article, we will show you how to set up and use Skype on the two most popular smartphone operating systems currently Android and iOS.

First, proceed to download and install on your phone

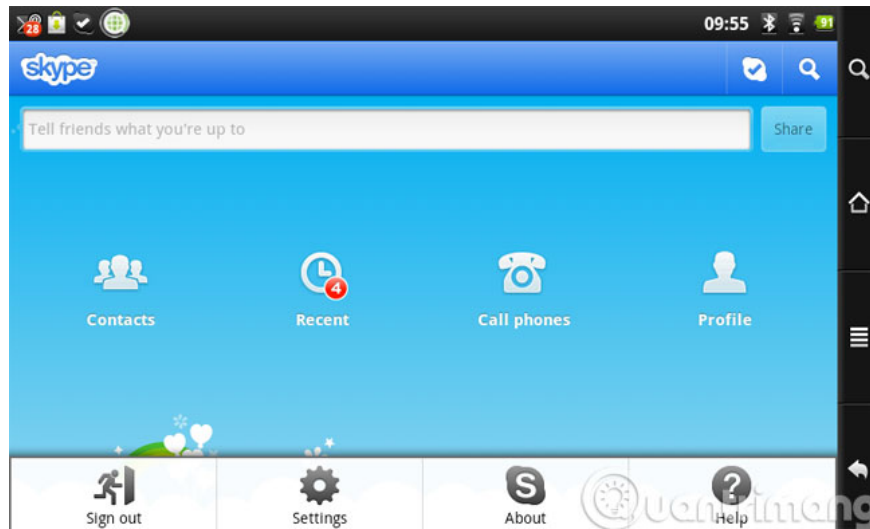

1. Download Skype for iOS
2. Download Skype for Android

Setting up Skype:

On Android: after completing the installation process, click on the Skype icon outside the **Home** screen to launch the application. After that, the system will ask you to log in to your account (or create a new one if not yet). Next is the process of syncing contacts, the steps here are done according to options, such as the entire contact list, assigning additional components to Skype's list . If you add a contact phonebook to The list inside **Skype** can easily make calls to phonebook addresses directly from **Skype**.

On the main monitor screen of Skype, we will see 4 function buttons: **Contacts, Recent, Call phones, and Profile** . Inside:

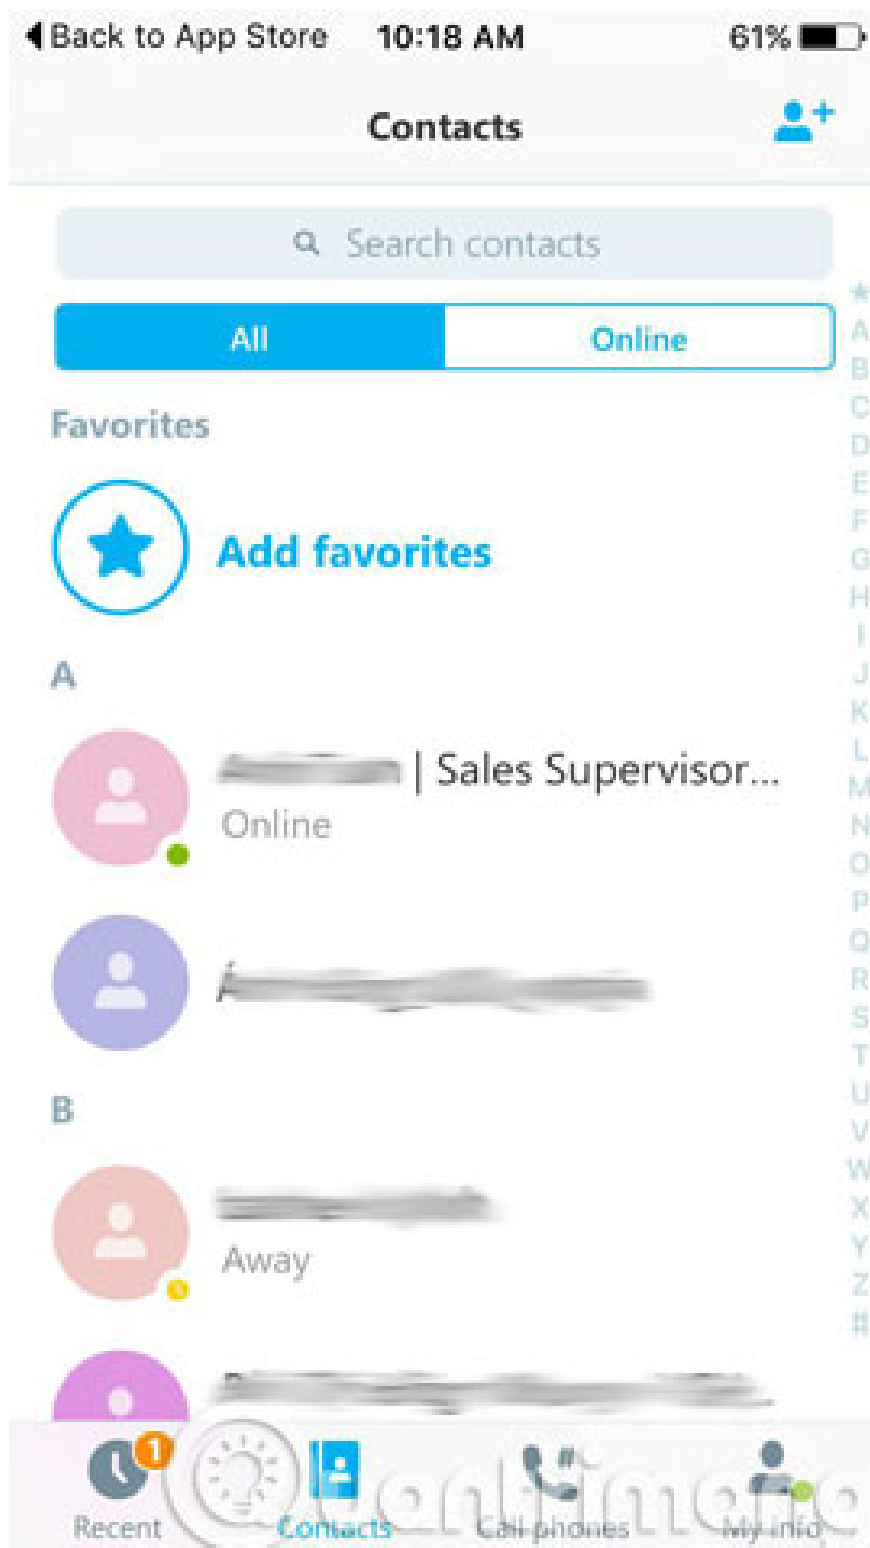

- **Recent** : Displays the most recent, incoming and missed calls
- **Call phones:** switch to the screen to make a call
- **Profile** : allows users to change, update information and personal status

In addition, you can access the **Settings** function, which is used to set the notification display mode, **IM** options, the self-start mode of **Skype** when the system works .

On iOS: after you finish the **Skype** installation process, click on the program icon to start. Similar to **Android** , the system will require users to log in with **Skype** account.

After that, we will be moved back to the **Contact** list. At the beginning, we only had the last contact **Skype** component saved in the list, to display the entire contact in the phone, press the **Contacts** button at the bottom of the screen.

Skype for iPhone version has 4 main functions: **Contacts**, **Recent**, **Call phones** and **My Info** . Inside:

1. **Recent**:The most recent contact
2. **My Info**:Set up personal information

Make a call:

In fact, we can make two different types of calls: **Skype to Skype** and **Skype to Phone** . First, **Skype to Skype calls** are completely free, while **Skype to Phone** is charged at a relatively low price.

First, open the **Contact** list in **Skype** , for **Android devices** , open the **Contact** list, click the icon next to **All contacts** and select **Skype** . On iOS, you open the **Contacts** list, click the button in the upper left corner and select **Skype Contacts** at the next screen.

Then, select the contact list in Skype to call and press **Call** . Besides the option of sending direct messages or video calls:

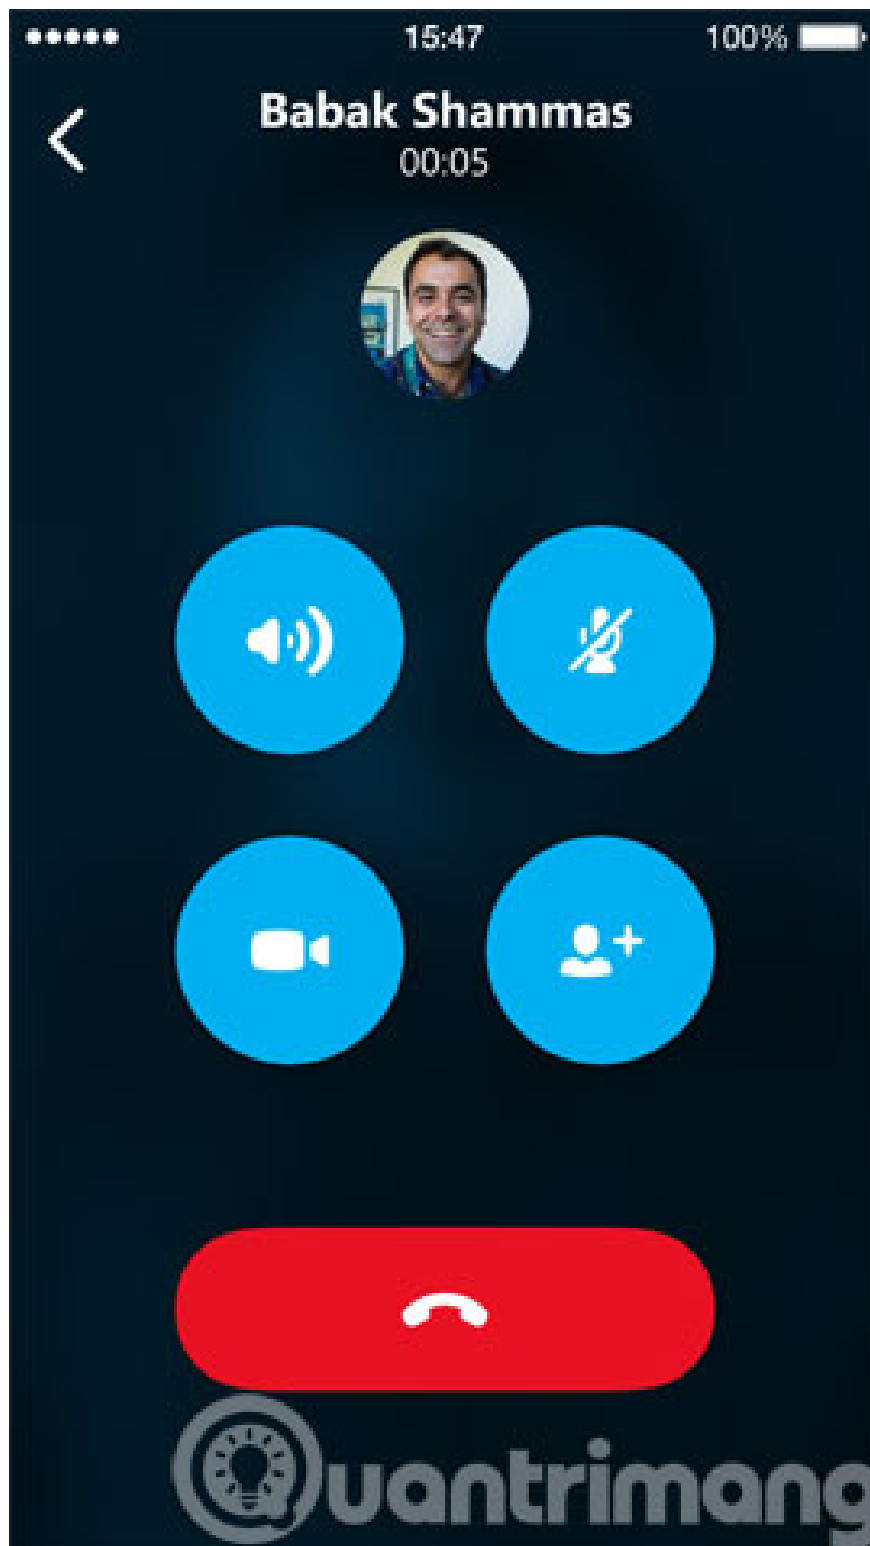

Say hi to 
Your conversation will appear here.

Type a message here

Make a Skype to Phone call:

In case you want to set up a list of regular calls, select the **Call phones** tab . If the caller account has been stored in the phonebook of the phone, click the **Phonebook** icon (in the upper right corner for **Android** and **iOS** phones), then select the number to call here. If not, use the number dialing function on the touch screen to make a call. Besides, please remember to change the corresponding country code so that it is correct, because **Skype** is an international calling service, so there are no conventions or concepts of 'domestic calls'. In fact, users will be paid via **Skype's** respective usage services and packages, **Skype** 's mobile support application, and this rate is

based on the time of each call.
