

Use space keys like trackpad with Synaptics SmartBar technology

Forget about sliding hands on the trackpad of notebooks because SmartBar technology can now help you mark text, zoom on the screen or bring a better gaming experience right on the spacebar.

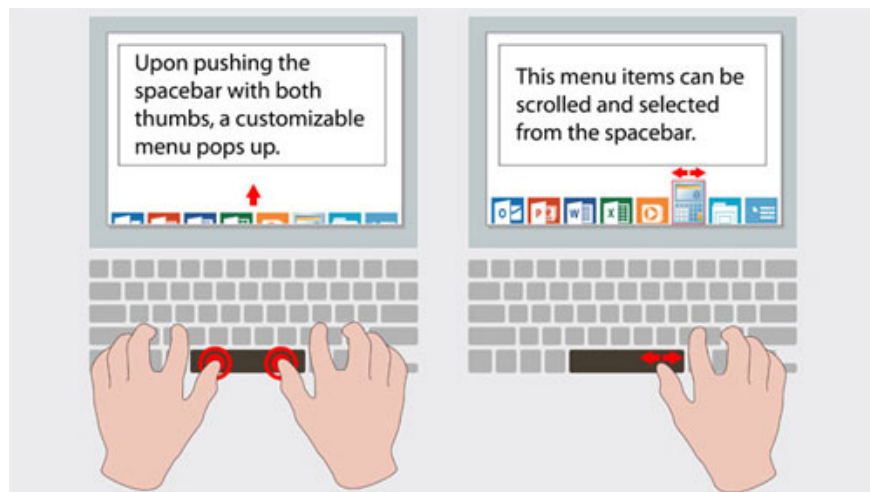

Forget about sliding hands on the trackpad of notebooks because SmartBar technology can now help you mark text, zoom on the screen or bring a better gaming experience right on the spacebar.

What does ForceTouch Trackpad do on a Macbook?

Synaptic, which owns a number of leading touch technologies, today announced an invention that allows integration of gesture control into commonly used keys on the keyboard.

While laptop makers have long used TouchPad as an alternative to traditional mice, Synatics wants to bring the touch experience closer to the user's finger by integrating. SmartBar technology on spacebar spacebar.

According to Synaptics, SmartBar is the first technology that allows computer users, gamers or even office workers, to use the spacebar to control touch operations.

This technology is now available for manufacturers to integrate into their personal computers. Synaptics has a production relationship with many computer brands such as Samsung, LG, Sony and Logitech, so maybe this technology will be popular at a wide range in the near future.
