

Use Sparklines in Excel

Spark Lines in Excel is a small chart that you can put inside cells to view data and charts on the same table. You may know a lot about how to use Charts in Excel but maybe you do not know Sparklines.

Spark Lines in Excel is a small chart that you can put inside cells to view data and charts on the same table. You may know a lot about how to use Charts in Excel but maybe you do not know Sparklines.

The following article shows how to use Sparklines in Excel spreadsheets.

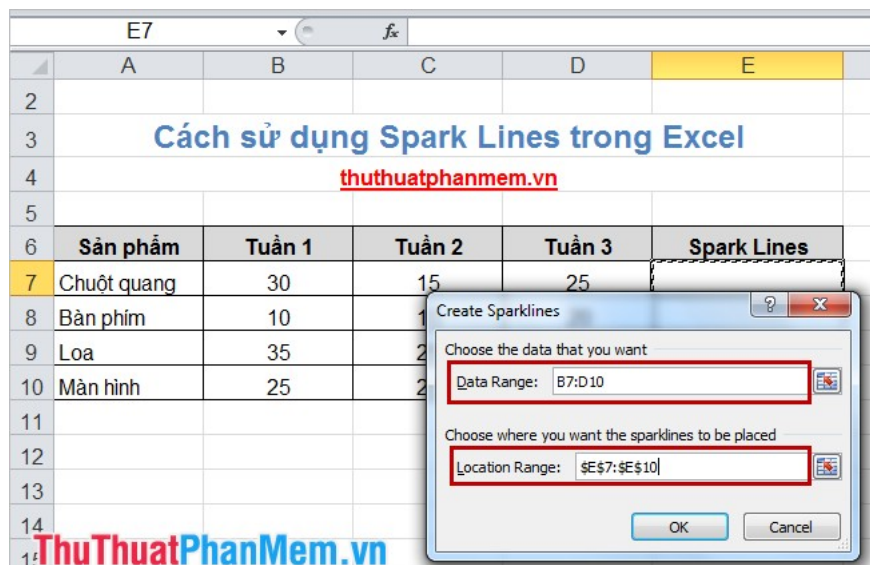

Step 1: You need to open the Excel file containing the numeric data you want to create a trend chart for that data. Then you select the Excel cell that you want to place Sparklines. Select the **Insert** tab and in the **Sparklines** section you select the type of chart you want to draw, for example choose **Line** .

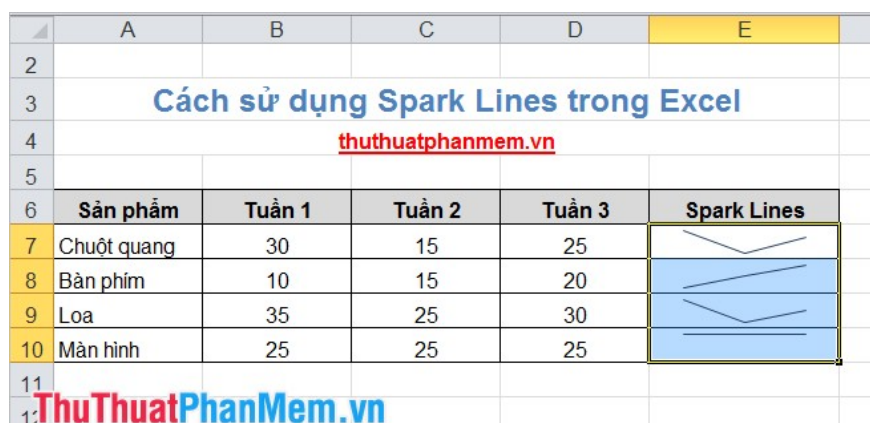

Step 2: In the dialog box **Create Sparklines** , you enter the data cells you want to create a chart in the **Data Range** . Part **Location Range** is the cell that will contain the chart.

You can select data to draw multiple charts at the same time in **Data Range** and corresponding to **Location Range** .

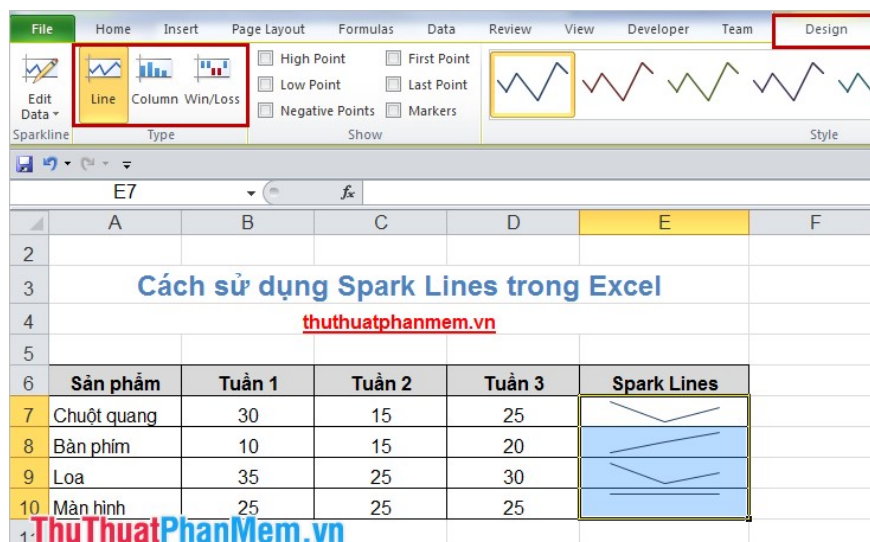

Then click **OK** .

The charts will be displayed in the cells you select in the **Location Range** .

If you want to change the type of chart you select the chart to change the style, there will appear **Design** tab you select the type in **Type** .
