

Use the CMD command to remove viruses on Windows computers

Once the computer is compromised, the virus can cause a variety of problems such as slowing down the computer operating system, and even some viruses that can steal user data.

Today viruses are becoming more "cunning", they can "penetrate" users' computers through Internet browsers, USB devices and even through the installation of applications. and software.

Once it has penetrated the user's computer, the virus can cause a variety of problems such as slowing down the computer operating system, even some viruses can "steal" user data. .

There are many ways to get rid of hateful viruses on your computer, users can use programs, anti-virus software, . Also, many unknown users can use CMD command can also Remove virus on Windows computer.

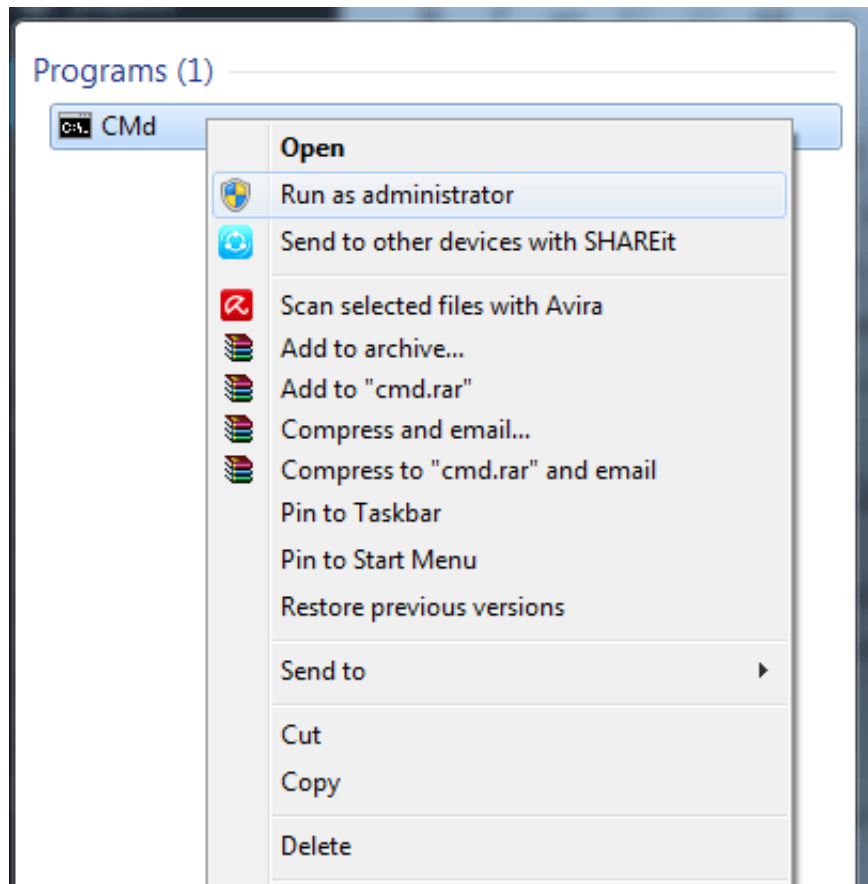

Remove the virus on your computer using CMD

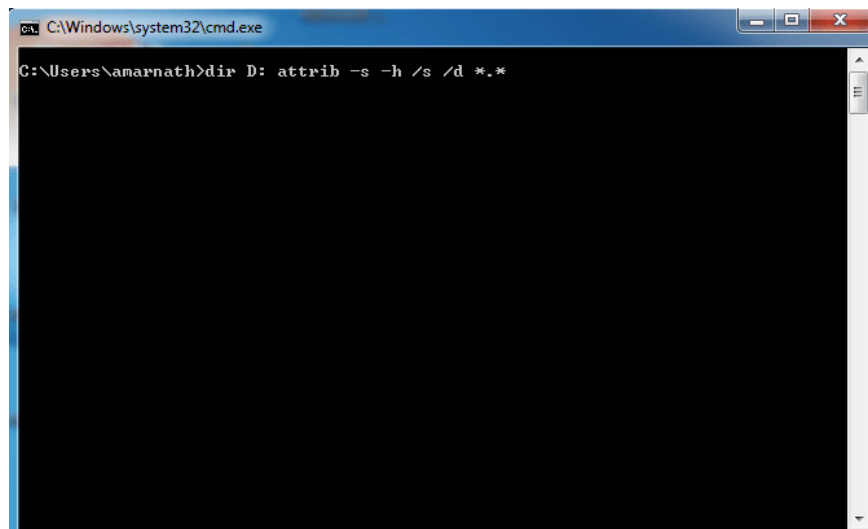

In fact, the Command prompt is a utility program that is used to access all system files. Also you can use CMD to remove viruses on your computer.

To remove the virus on your computer using Command Prompt, follow the steps below:

First click on **Start**, then enter **CMD** in the Search box, right-click the CMD icon and select **Run as administrator**.

Now the screen of the Command Prompt window appears, the next step is to select the drive you want to remove the virus from.

If you want to remove the virus on drive D, enter the following command into the Command Prompt and press Enter:

```
dir D: attrib -s -h /s /d *.* *
```

```

C:\Windows\system32\cmd.exe
2 File(s) 724,908,662 bytes
