

Useful Google search tips you can't miss

Google Search is one of the most widely used search engines. Searching on Google requires specific techniques to ensure the most accurate results. Below are some of the most commonly used Google search tips.

Google is considered the largest search engine today, used by the vast majority of people worldwide. With just one click, you get thousands of results instantly.

The most effective way to search on Google.

Table of Contents:

1. Eliminate results related to keywords .
2. Find exact keywords with quotation marks "" .
3. Search by image .
4. Search content on a specific website .
5. Search websites with similar content .
6. Convert currencies and units of measurement .
7. Perform online calculations .
8. Check flight information .
9. Check movie showtimes .
10. View world time .
11. Timer tool .
12. Search by file format .
13. Search for the definition of a word .

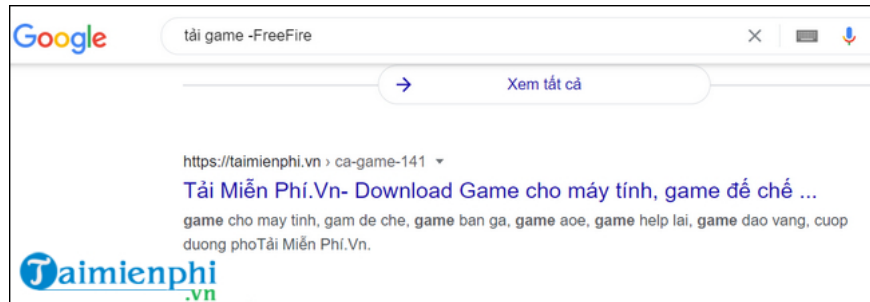

10 Essential Google Search Tips You Can't Miss

1. Remove results related to the keyword.

You can search for content related to your main keyword and remove any content with the keyword after the hyphen ; this is a pretty good and the best method for filtering out relevant content.

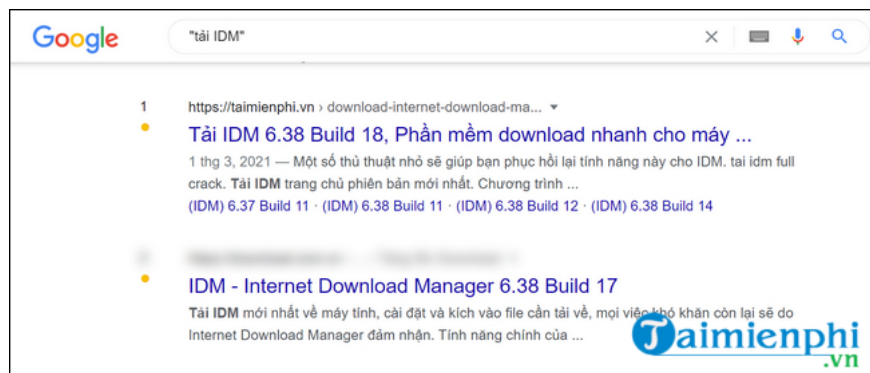

Example: **Download Game - FreeFire**

For long keywords with multiple syllables, you need to add quotation marks (""). For example: **Download Game -"Garena Free Fire"**

2. Find the exact keyword enclosed in quotation marks "" .

This is a fairly familiar method for many users. When searching with quotation marks "", Google will display all topics related to the keyword, and the content will be much more accurate.

3. Search by image.

Here, you can search by **image URL** or **images from your computer** . When searching by image, Google will return related images or the sources where those images were posted.

You can download the latest version of Google Chrome or C?c C?c here to use this feature.

4. Search for content on a specific website.

You can use Google to search for content within a website by typing: keyword, **site:website address** . Google will then return results related to that keyword within that website.

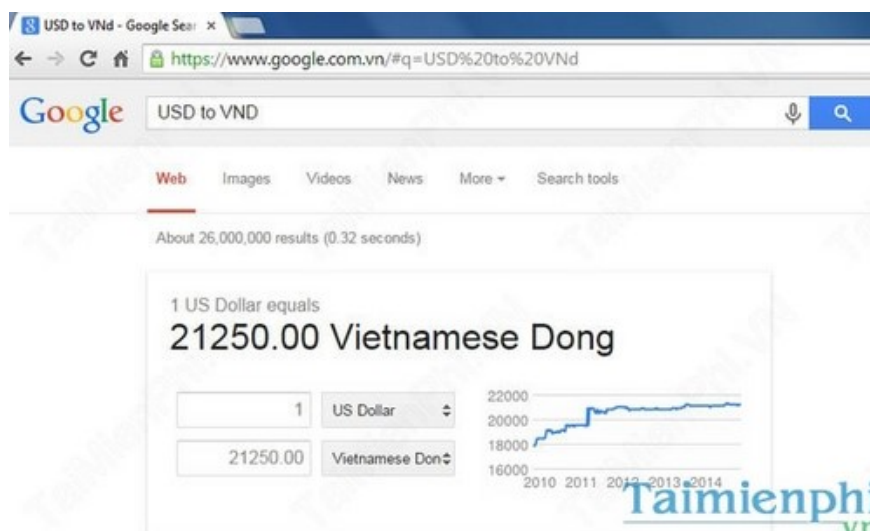

5. Search for websites with similar content.

To find websites with similar content, enter the following into the Google search engine: **related:website name** . Google will then return results showing websites with similar content to the one you entered.

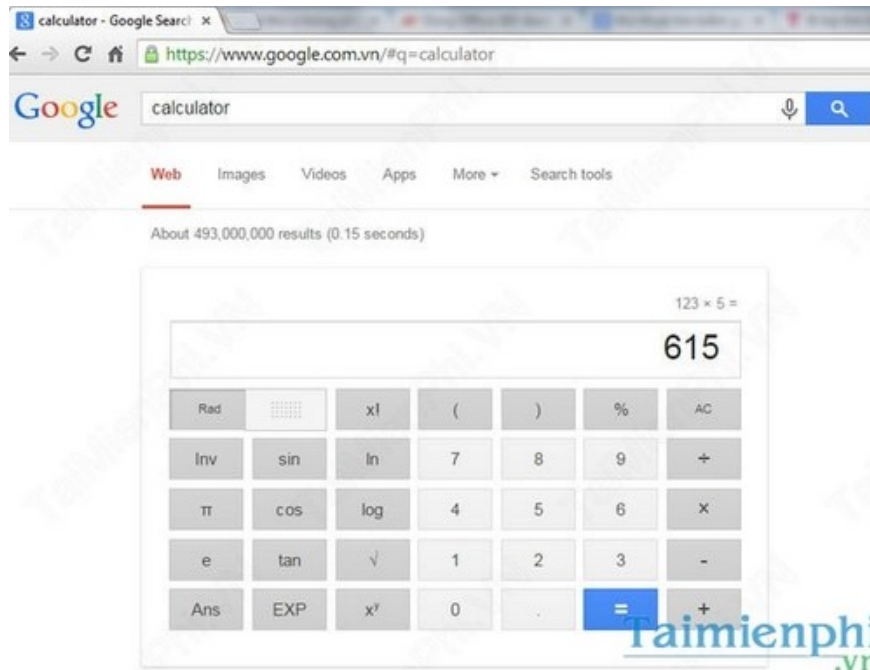

6. Currency conversion, unit of measurement conversion

To convert currencies or units of measurement, use "to" between two currencies or units of measurement. For example, to convert from USD to VND, enter: **USB to VND** , . Google will then return the search result at the top. (Currently, 1 USD = 21250 VND as shown below)

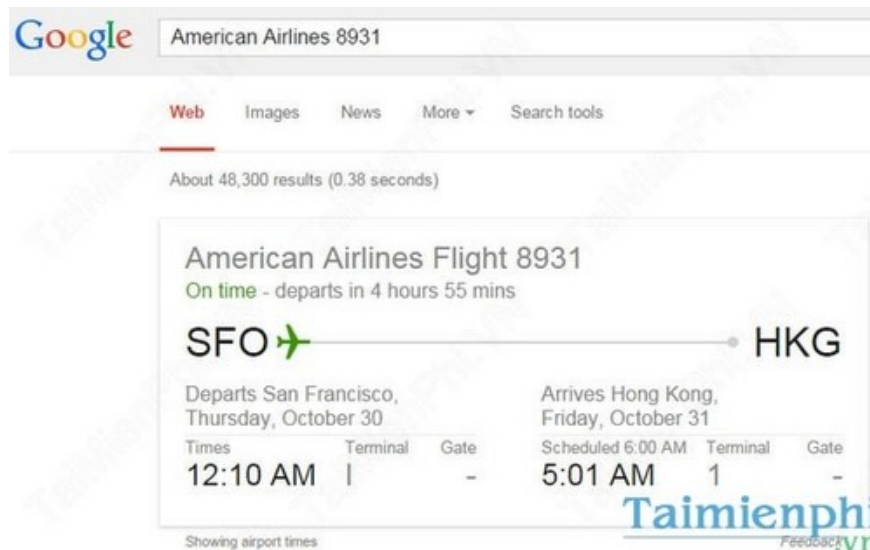

7. Perform calculations online.

You can perform mathematical calculations directly on Google by typing in the word " **Calculator** ". A calculator window will then appear, allowing you to easily perform calculations online.

8. Check flight

Checking your flight details allows you to know when your flight will land, its status, etc., making it convenient for picking up or dropping off family at the airport. To check your flight, enter **the airline and flight number** . For example: **American Airlines 8931**. The flight information will then be displayed. (Departure 12:10 AM on October 30th - Arrival 5:01 AM on October 31st)

9. Check the movie showtimes.

You can check movie showtimes by typing into Google: **showtimes:movie title** . The results will then show you the schedule. However, this feature is not yet supported in Vietnam.
