

Useful office application for Lumia 1520 and Lumia 1320

These two phablet products launched by Windows Phone 8 have made many people begin to think about using phablets instead of laptops when working outside the office.

These two phablet products launched by Windows Phone 8 have made many people begin to think about using phablets instead of laptops when working outside the office.

Windows Phone 8 operating system is developing an application store not only in quantity but also in quality and ability to synchronize with other Windows devices. Here are some useful office applications for Nokia Lumia 1520 and Nokia Lumia 1320 phablets.

SkyDrive

SkyDrive is the free cloud memory that comes with your Microsoft account. Any Nokia Lumia user will have this additional 7 GB free hard drive available. Recently, Microsoft also gave Windows Phone users an additional 20 GB of free storage in 2014.

The convenience of SkyDrive is that users do not need to e-mail files to themselves or copy (and possibly lose) USB drives to take them anywhere. Instead, SkyDrive simplifies everything by saving data on Microsoft's cloud system. Users are completely assured of security issues and easily accessible from any device.

Currently, all Nokia Lumia products have the option to Save photos and videos taken from Nokia to SkyDrive, which can be accessed at any location, at any time.

Microsoft Office and One Note

All Lumia users enjoy the ability to work conveniently on smartphones or phablet thanks to the built-in Microsoft Office office suite. Reading and handling Word, Excel and Power Point documents becomes simple and fast.

In particular, the available One Note application in the machine also helps to make notes in any convenient way such as inserting photos, inserting record files or inserting text into the same document to record the diary of the itinerary. All notes will also be automatically updated to SkyDrive and can be accessed again with a computer or any other Nokia Lumia device.

Lync

Microsoft Lync is an online meeting application with images, helping users not to miss any important meeting with colleagues. The application also allows you to review the content of the meeting, invite more participants, mute or remove some participants, transfer your call to another phone number and many other utilities.

Handyscan

With Handyscan, users can turn their offline jobs online. It will scan certain documents or objects (a hand-drawn sketch) and upload to SkyDrive. Users can zoom, crop, make collages, add text and other text characters. The fully charged version also supports e-mailing scanned documents and converting them to PDF format.

Splashtop

Splashtop allows access to desktops or laptops from the phone. What's interesting is that it allows you to control both MacBooks via Lumia phones. Users can access applications, games, multimedia content and files contained in the device via an Internet connection.

Sketch Board

Sketch Board allows to create drawings and diagrams right on the user's phone, a good application for ideas that arise on the way. In addition, the software also supports drawing, adding photos, deleting, using layers and changing the opacity of photos.
