

Using deepfake to fix the movie CGI the new Lion King, the young man earned a beautiful result

Two artists Nikolay Mochkin and Jonty Pressinger have teamed up to use deepfake in the new movie The Lion King, which has just been released.

Deepfake with the ability to create fake images, fake videos about any person and things that this person has never done before. If unfortunately bad guys take advantage of this technology to use for bad purposes, it can cause extremely serious consequences. However, it is only the reverse, this technology is also used in many other purposes to bring joy and help for life. For example, video editing CGI movie The new Lion King of the two young people below.

Two artists Nikolay Mochkin and Jonty Pressinger have teamed up to use deepfake in the new movie The Lion King, which has just been released. The graphics in the new version are judged to describe the exact shape of a real-life lion, but many people consider it 'indifferent', no longer the charm of the animated version. Therefore, the two young artists decided to use the first version's graphics that were released in 1994 to replace the graphics in the new version.

Although the video is only 18 seconds long, we can see that the real-life epics of the new movie have been replaced by the old version, which has an expressive and more soulful appearance.

1. David Beckham in this video can speak 9 languages ??but that makes the viewer panic
2. The truth about Darkweb's origin
