

Using gum also passes the fingerprint sensor under the screen of Nokia 9 PureView

Nokia 9 PureView is a flagship equipped with advanced features such as fingerprint sensor under the screen, 5 camera system.

Nokia 9 PureView is a flagship equipped with advanced features such as fingerprint sensor under the screen, 5 camera system. However, according to user reviews, this phone is currently the flagship with the worst fingerprint sensor today, though not installed fingerprints but still misidentified and easily fooled by chewing gum .

Specifically, according to videos by @decodedpixel posted on Twitter, this guy can easily unlock Nokia 9 PureView using the hands of others. Even this device is easily fooled with only 1 chewing gum.

Unlike the ultrasonic fingerprint sensor with only Galaxy S10, fingerprint sensor on Nokia 9 PureView is optical, only capturing 2D images of fingerprints for comparison. Therefore, passing the lock screen of Nokia 9 PureView is quite easy.

Previously, many users also gave bad feedback on the fingerprint sensor of Nokia 9 PureView due to slow, unstable operation.
