During the cooking process, using infrared stove will not be able to avoid the kitchen surface being stained or the burnt burns stick. How to clean the infrared kitchen surface for the most effective and safe? Let's find out with Quantrimang !

I. Simple tips for cleaning infrared kitchen

1. Use rice to clean grease

The cleaning solution is very effective in cleaning stains, but it is easy to lead to corrosion, fading the kitchen surface.

There is a pretty folk tip is that you use lake water of rice when boiling, dilute and then apply a thin layer on the kitchen surface, when the rice water is dry, it will absorb grease and grease. After that, you just need to clean the dried rice layer.

2. Immediately wipe the food that flows to the kitchen while cooking

During processing, if there are stains from the food coming out, you must turn off the stove immediately, then wipe it off with a dry towel.

Otherwise it may cause short-circuit and fire of the circuit of the electric stove, causing severe damage.

3. With stubborn stains when using the stove to bake food

Step 1:

1. You use a soft towel to dip a little warm water, combined with a little dishwashing liquid.
2. After that, apply evenly to the stubborn stains, the food plaque is dry and burnt.
3. Moisten stains for 5-10 minutes.

Step 2:

1. Use an aluminum or stainless steel spoon to clean the burning layer, food particles are hardened for a long time (Aluminum material has soft properties, does not scratch the glass surface).
2. Note: In case the stain still does not come out, go on to step 3 and return to this step 2.

Step 3: Soak the stain in the lemon mixture and baking soda

1. Mix baking soda powder with a little lemon and warm water, slightly concentrated.
2. Then pour the lime and baking soda mixture on the dirty spot and soak for 10-20 minutes.

Step 4: Clean the kitchen surface with sponges, towels and warm water.

1. You use a sponge to clean up the plaque, dirt and food left on the kitchen surface.
2. Use a clean towel and warm water to clean the kitchen surface again.
3. Use a clean dry towel until the infrared kitchen surface is clean and shiny.

II. Note when cleaning infrared kitchen

1. Before cleaning the infrared stove, it is necessary to unplug the electricity so that the stove is completely cooled. Early impact when the stove is too hot can break the toughened glass surface very dangerous.
2. Only plug in and operate the kitchen when the kitchen is cleaned. When the kitchen is not really dry, do not plug the power to avoid electric shock or electric shock.
3. Absolutely do not allow water to enter the circuit inside the kitchen, which can damage the kitchen.
4. In addition, for the kitchen to be durable, you should periodically clean every 2 weeks / 1 time.
