

Viber for iPhone completely changes the iOS 7 style interface

Follow other OTT applications, the Viber version for iPhone has just changed to the flat style interface of iOS 7 with completely redesigned icons.

Follow other OTT applications, the Viber version for iPhone has just changed to the flat style interface of iOS 7 with completely redesigned icons.

Besides the optimized interface for iOS 7 platform, Viber version 4.2 also has some new features:

1. Share and edit 10 photos or videos at the same time for friends.
2. Additional features to block (block) unwanted objects. This is a necessary measure when spamming through Viber is raging in Vietnam.
3. Send video messages with longer duration, up to three minutes.
4. Signs that other users are typing characters, compatible with Viber versions for Android, Linux, OS X and Windows.
5. Fixed some minor errors.
