

Video concept of Samsung Galaxy S10 makes iPhone X look like an old phone

Although it is about to release the Note 9 but S10 is making Samsung fans anxiously look forward to the massive upgrade rumors on the Galaxy S. line. Perhaps it's time to say goodbye to the iPhone.

A new concept video revealed that Samsung Galaxy S10 - the next high-end phone from the Korean phone maker - will have significant changes compared to the current S9.

Accordingly, there will be two models, the larger one will have triple-camera, providing more advanced imaging capabilities. Perhaps it is only available on Galaxy S10 + because the model still uses dual camera system.

Almost no bezel

Previously there were rumors that the S10 has almost no bezel, making the screen expand to its fullest. This is also the orientation that Samsung aims for in its new generation of phones.

The video also shows the ability to put the fingerprint sensor under the screen. Although it has been rumored for a long time, neither Apple nor Samsung have been able to develop and mass produce this feature on their phones. If S10 is equipped with this feature, the camera's back will only be left with the camera and flash.

The device still has a headphone jack but is moved to the position above, not as convenient as on the current Galaxy S9.

Galaxy S10 is expected to be released in early 2019 and according to many sources, Samsung will release from January. This model may also have a third model, creating the Note 3 replacement kit, which supports the S Pen as well, as it believes Samsung wants to merge the Galaxy S and Note series into a single brand.
