

# Video leak reveals new features of IE 11 for Windows Phone 8.1

There were videos related to Internet Explorer 11 web browser for Windows Phone 8.1 with many new features noticeable.

There were videos related to Internet Explorer 11 web browser for Windows Phone 8.1 with many new features noticeable.

Accordingly, the new video of **IE 11** on Windows Phone 8.1 has been uploaded to *Unleashthephones* . From the video, Microsoft has made important additions, most notably the **Stop / Refresh button** has been moved to the address bar instead of being separate as the older version.

However, the most notable is still **Reading Mode** - a completely new feature that allows users to view text only on the web without being bothered by advertising or the format of the site. This will help minimize the distraction of the reader. Reading Mode will also allow users to choose different display modes such as *Bright, Light, Medium, Dark* or *Justified* to make it easier to read text.

Besides, IE 11 on Windows Phone 8.1 also allows *saving passwords* , *quick file upload* capabilities, *extended support for HTML5 and WebGL* .

Expected, Windows Phone 8.1 will appear at Microsoft BUILD conference in the form of a preview in April here.
