

Video tutorial for creating adhoc wifi on Windows 7

Wifi adhoc - a concept that is both familiar and popular for many computer users, but in fact, not everyone knows how to create wifi hotspot based on their laptop.

Wifi adhoc - a concept that is both familiar and popular for many computer users, but in fact, not everyone knows how to create wifi hotspot based on their laptop. Previously, TipsMake.com had an article introducing how to create wifi adh on Windows XP:

1. See the tutorial on creating adhoc on Windows XP

And this time, we continue with creating adhoc on Windows 7 (with Windows Vista, 8 and 8.1 you can do the same). However, you need to remember that in order to create wifi adapter, the computer you need has a strong and stable transmission line, Wifi is on.
