

Vietnamese designer discovered that the button for sending messages on iPhone is deviated a few pixels, making the world designer community 'stir'

For the worldwide design community, this is unacceptable because Apple has always set the gold standard for product design and its software interface.

Recently, Anh Nguyen - a designer currently living in Hanoi, posted on his Twitter page a picture of the button for sending messages on iPhone that is skewed between vertically and horizontally with a few pixels attached. "Wishing everyone a happy Tuesday!" status line. Immediately, the tweet of the Vietnamese designer surprised many designers around the world.

Probably for most users, the fact that the iPhone's text message button is set a little off won't have any effect, even if they don't care if it's misaligned. But for the designer community around the world, this is "unacceptable" because Apple has always set the gold standard for product design and its software interface.

The discovery of the Vietnamese designer guy has received the attention of the designer community in the world.

The send button on the iPhone message is located near the right corner of the message frame with a circular design. But according to the Vietnamese designer, the distance at the top and the right side of the message button

are aligned by about 3 pixels.

On Twitter, many designers around the world have made very funny reactions to this design bug.

1. Serious vulnerability discovered to allow jailbreak iPhone 4s to iPhone X permanently, Apple can not patch?
2. The most durable tempered glass on the smartphone market of the iPhone 11 Pro shattered after a light fall on the Apple Store
3. IOS 13's Dark Mode saves outstanding battery life, this practical test will show you that
