

# Virtual Assistant Google Assistant will be integrated into the Messages application

Google recently revealed information about integrating the virtual assistant Google Assistant into the Messages application (formerly Android Messages) to display suggestions related to the ongoing conversation, bringing convenience. for users.

Google recently revealed information about integrating the virtual assistant Google Assistant into the Messages application (formerly Android Messages) to display proposals related to the ongoing conversation, bringing convenience. for users.

This means that when users mention weather conditions, a particular restaurant, a movie in their conversation with friends, the Google messaging application will display Google Assistant links on the side. Under the conversation allows users to access more information about that topic quickly.

Google says only the information listed in the Google Assistant link below the conversation of the user sent to Google and the content of the conversation is not.

On Android phones, to access the Google Assistant Assistant, users can use the keyword 'Okay, Google' or press and hold the Home button. On a 2 or 3 Pixel, to activate a Google assistant you can squeeze both sides of the phone.

Before the Messages application, Google brought Google Assistant to Google Maps, allowing users to play music, make calls, and ask for directions right from within the app.
