

Virtual assistant of Windows Phone 8.1 officially appears

Cortana is Microsoft's answer to Siri on iOS. There have been a lot of images leaked to Cortana, but the official image today (March 3) is revealed.

Cortana is Microsoft's answer to Siri on iOS. There have been a lot of images leaked to Cortana, but the official image today (March 3) is revealed.

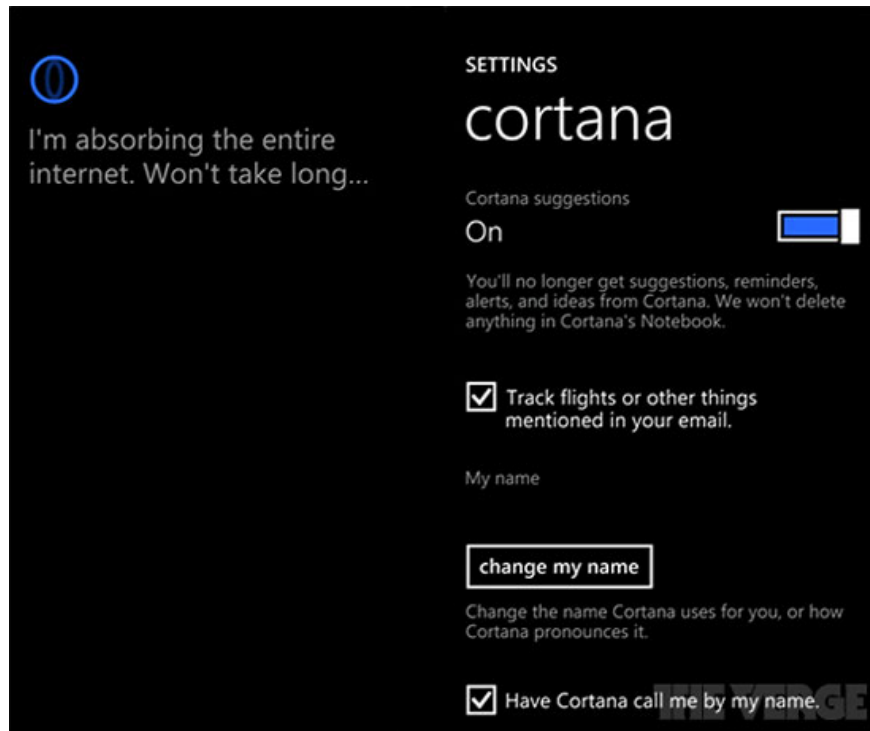

The information that Microsoft will put the way of conversation and personality of users into the Cortana virtual assistant of Windows Phone. The latest image posted on *The Verge* shows that **Cortana** 's interface is not a girl but a circle like a sphere in the center of the screen.

Cortana is a ball in the middle of the screen

However, the sphere can react vividly according to time and context. For example, the sphere will change the other image when it is processing information or when it is answering the user.

Cortana 's screen shot also shows what will be integrated. One of them is to allow access to email accounts to handle information about flights or other jobs. A setting at the top also confirms that users can manage Cortana automatically.

Interface to install Cortana

Most reports said that Cortana is an update in the upcoming version of Windows Phone 8.1. So those who are using Windows Phone 8 smartphones should be happy to welcome Cortana.
