

Visual Studio Code now has an extremely useful color picker

The cross-platform code editor of the new Microsoft Visual Studio Code adds extremely useful features in the latest update.

The cross-platform code editor of the new Microsoft Visual Studio Code adds extremely useful features in the latest update.

1. Visual Studio Code already has the feature to automatically reverse code

The Visual Studio Code editing tool now has an integrated color picker that allows you to search exactly the color you want, without using Google or Bing color picker. This tool will appear when you drag your mouse over a hex string or RGB color code, then simply select the color as easily as the other color picker tools. There is also a slider to select transparency for color.

Small changes are enough to make the Visual Studio Code appealing to developers

Adding color picker is not too big, but such small details make Visual Studio Code useful. Last August update brought some small additions but helped faster operations. The HTML tag will automatically close, you can also drag and drop the file from the built-in search engine in the editor.

You can view the full updates and download the latest version here: https://code.visualstudio.com/updates/v1_16
