

Vsmart Joy 3: Price, configuration and design

Although it has not been officially launched by VinSmart, Vsmart Joy 3 has appeared on the experience shelves of some mobile phone retail systems.

Although it has not been officially launched by VinSmart, Vsmart Joy 3 has appeared on the experience shelves of some mobile phone retail systems. As expected, Joy 3 will cost about 3 million VND, becoming a direct competitor of Samsung A10s, Xiaomi Redmi 8 or Realme 5.

Vsmart Joy 3 is equipped with a 6.52 inch screen, HD + standard resolution. The screen of the machine displays the details quite well, colors are more vibrant than the Joy 2.

The device is designed with a "water-drop" screen, but the border around, especially the lower edge is still quite thick but still acceptable in the price segment of about 3 million.

The back of the device is glossy, can change color. The back of the device can be quite easily scratched, so it is likely that it will be equipped with a silicon case attached.

Vsmart Joy 3 has up to 3 cameras on the back, similar to the Realme 5, including a 13-megapixel main sensor, an 8-megapixel sensor for super wide-angle and a 2-megapixel sensor for front support. The fingerprint sensor is centered.

The power and volume up keys on the Joy 3 are placed on the same side, the dual sim slot and the memory card are located to the left side.

Joy 3 is equipped with the latest USB-C charging port, battery capacity of up to 5,000 mAh. The power of the device comes from hip Snapdragon 632, 2GB RAM, 32GB ROM, expandable with microSD memory card. Joy 3 comes pre-installed with VOS operating system based on Android 9.0.

As expected, Joy 3 will debut this week.
