

# Want to load page speed on Edge browser faster, enable this feature

Microsoft Edge browser is integrated on Windows 10 version 1607 and the following versions are integrated features that support faster web page loading. To enable this feature you will have to enable TCP Fast Open, an extension of the TCP Protocol that allows data exchange during the first 'handshake' of TCP.

Microsoft Edge browser is integrated on Windows 10 version 1607 and the following versions are integrated features that support faster web page loading. To enable this feature you will have to enable TCP Fast Open, an extension of the TCP Protocol that allows data exchange during the first 'handshake' of TCP.

When TCP Fast Open is enabled, the data may be sent before the connection is complete, so that the 'response' will be faster.

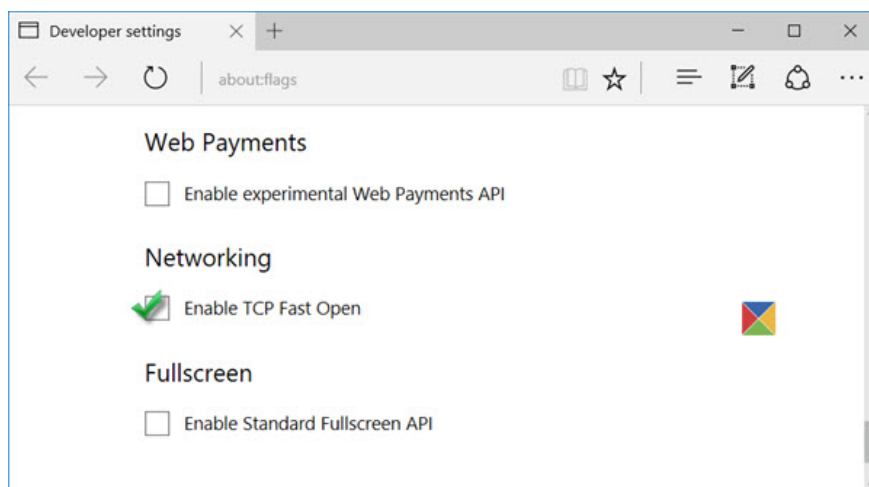

## Activate TCP Fast Open on Edge browser to load pages faster

TCP Fast Open is a new experience of Microsoft Edge browser. This feature can support loading web pages in Edge browser 10% - 40% faster.

To enable this feature, follow the steps below:

First open the Edge browser, then enter **about: flags** in the address bar and then press Enter to open the browser's Developers settings window.

Here you scroll down to find and check the option labeled **Enable TCP Fast Open** .

Once completed, restart your Microsoft Edge browser and try opening a new website to "experience" the page loading speed.
