

Warning anti-sweat products containing aluminum salts cause breast cancer

A shocking finding has just been found in drugs, anti-sweat gels from Swiss scientists.

A shocking finding has just been found in drugs, anti-sweat gels from Swiss scientists.

Previously, information on the use of body-based **anti-sweat** products **that could** cause **cancer** on the human body has been published. But the latest study from Swiss scientists has provided new, more convincing evidence of the above warning.

Photo source: Internet.

According to the Swiss research group, they have discovered that in sweat-resistant products that contain a lot of **aluminum salt compounds** or specifically aluminum chloride salts, these salts are capable of **absorbing moisture**, **blocking sweat glands**. It is an armpit, but it is also a cheap chemical, but few people think that this salt acts as an **estrogen** capable of promoting the spread and development of **breast cancer** cells.

To get the results, Dr. Andre-Pascal Sappino and his team have tested the compound of anti-sweat products on mice and monitored after long-term testing.

The Swiss research group announced that this aluminum chloride salt is as harmful as **the asbestos** used to be found when abused in construction materials, it is a cheap but capable chemical. Mesothelioma and some dangerous cancers in mice and humans. In addition, aluminum salt compounds in anti-sweat products are warned to have a boosting and spreading cause of *Alzheimer's dementia*.

' *I think we should stay away from anti-sweat products and should look for natural anti-sweat remedies safely and effectively* ' - Dr. Sappino said in a statement.
