Waterproof keyboard

Source: Symcod

Canadian Symcod has launched a waterproof SKM silicon keyboard. This type of keyboard is lighter than a normal keyboard, but it still keeps the structure hard so that users do not feel inconvenient to use it. The outer coating allows the user to wash the keyboard several times without fear of damage. SKM keyboard has 102 keys, connects via USB port and does not need to install drivers when using.

Clean mouse

*Source: **Belkin***

Belkin unveiled the mouse . clean. The difference of this device lies in its waterproof ability. This type of mouse is made of a special plastic that prevents water from penetrating the internal parts. When necessary, the user can bring 'em' mouse to 'scrub' under the faucet. Belkin equipment is sold for 30 USD and comes with a very elegant bag.

Laptop knows . drink water

Source: Itechnews

Japan's Panasonic has introduced two series of Y and W series laptops with the Core Duo T2300 technology. Particularly for Panasonic Y series, the weight of the machine is reduced to 1.5kg and especially the machine can withstand 100kg impact force as well as 'ignore' the impact of water. Panasonic has also introduced batteries for both models that allow up to 7 or 9 hours of usage. However, the hard drives of these new models are only 60GB and do not include Blu-Ray printing technology.

SD memory card is waterproof

Source: *pdalive*

Buffalo also developed a waterproof memory card product. It looks like a regular memory card, but Buffalo's products are not "afraid" of any impact of liquids.
