

# Ways to prevent applications from accessing the microphone on the iPhone

How to prevent applications from accessing the microphone on the iPhone will help you avoid being overheard through the microphone on the device

You've probably seen a notification that allows applications to access Micro on iPhone when using the Micro-related feature of that application. For example, talking by phone, video calling, texting with microphones, language translation . Many applications on smartphones have such features.

And when you access the microphone, they will probably hear your conversations, even if the application is not activated. The data collected during eavesdropping will be used for ads that suit you, there are games that collect what you are interested in, either from TV, PC, Laptop, program live streaming and advertising . In addition, this information is analyzed and combined with your position, see which stores you go to, what you care about.

Not only does the application access the eavesdropping microphone, but the features on the phone can also eavesdrop on you, such as **Hey Siri** or **OK Google** to quickly call the virtual assistant. These features can also listen to what you say every day, even if they can record your conversations.

And although technology companies have stated that they do not record user audio when using virtual assistant features, there is no certainty that their claims are true. To prevent that, under this article TipsMake.com will teach you ways to prevent the application from accessing the microphone on the iPhone.

## Ways to prevent the application from accessing the microphone on the iPhone

### 1. Do not allow applications to access the Micro

When you download an application, if the application has the main feature to use the Micro, the application will ask you immediately whether to allow access to the microphone or not. For applications that have to use the Micro but have not allowed access, when you start that feature, you will have to allow the application to access the Micro.

You can click Decline if it is not needed.

**“Messenger” Muốn Truy cập Micrô**

Điều này cho phép bạn quay video có âm thanh, thực hiện cuộc gọi thoại và video, tạo tin nhắn thoại và v.v.

Từ chối

OK

And if you have missed the hand click on OK, you can still stop allowing microphone access on iPhone, just go to settings, scroll down and select which applications you have just allowed access, turn off the item **Micro** is accomplished.

# Cài đặt

But as such, you will not be able to use certain features in some applications, such as when you call Facebook Messenger video above, you must allow the application to use the microphone to be able to use this feature. So if you do this, then select the applications that you feel most trustworthy.

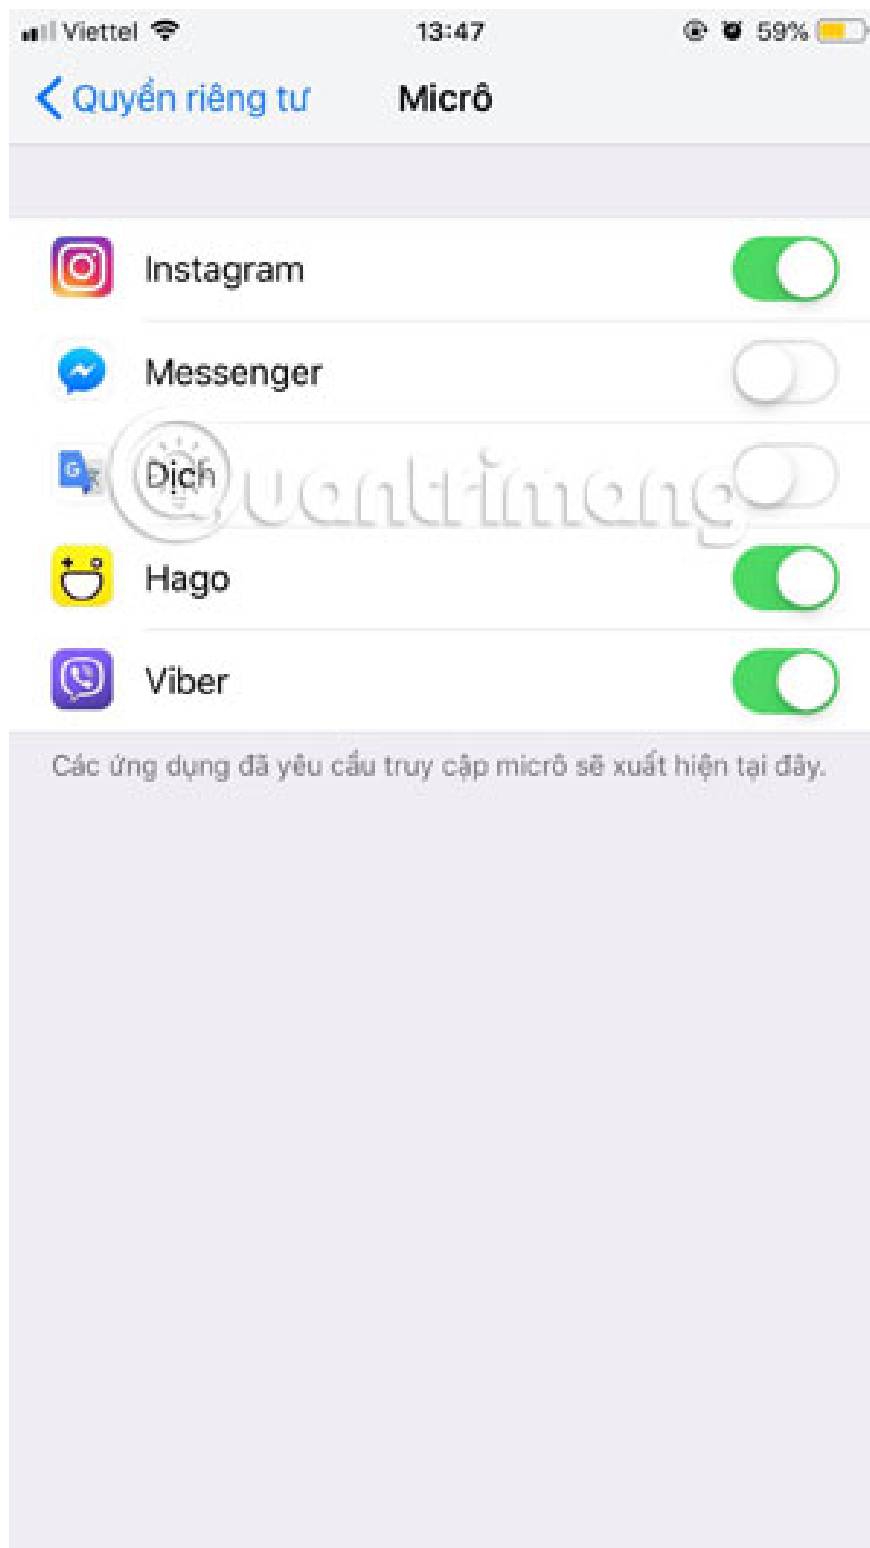

## **2. Block application access to the microphone according to the list**

Second, if you want to remove the app's microphone access when it is accidentally issued to them, go to the Settings app (**Settings**) > click **Privacy (Privacy)** > press the Microphone (**Microphone**) .

Here you can see a list of applications that you have provided microphone access on your device, you can turn off all Micro access in this list.

### 3. Turn off Hey Siri

As mentioned above, even the voice command feature for Siri virtual assistant will be able to hear what you say if you have access to the Micro. If you can't use Hey Siri to quickly call Siri, turn it off by opening the **Settings** app> dragging down and selecting **Siri & Search** > and turning off the "**Hey Siri**" **Listening** feature. .

Although Siri will still use the microphone when you ask for this virtual assistant, the active ability to hear your voice from the standby microphone is no longer available.

Of course, there is an application that eavesdrop on you, because just because you give them access to the microphone on your device, you should select the most reliable applications to provide microphone access to applications. use it.

Hopefully, through the above article, you will learn more about how user information collection services serve their advertising needs, as well as how to stop providing application permissions for which applications are in

use. Use your microphone.
