

# What AI features will be available in iOS 18?

According to journalist Mark Gurman's judgment, iOS 18 and macOS 15 will provide a series of new AI features such as automatically created icons, suggested responses to emails and messages...

A series of groundbreaking AI features on iOS 18 and macOS 15 promise to be the focus at Apple's upcoming Worldwide Developers Conference (WWDC), these features focus on enhancing the user experience. through practical AI tools and improvements to core applications.

Accordingly, some AI features expected to be integrated into iOS 18 include: photo editing, voice recording, suggested responses to emails, messages, automatic emoticons based on message content, improved Safari web search, fast and reliable hpn search in Spotlight, more natural interaction with Siri, summary of missed notifications and individual messages, Xcode developer tools.

According to journalist Mark Gurman, iOS 18 will integrate many AI features, helping to "manage the lives" of users. Apple is said to want to catch up with its competitors when negotiating with OpenAI, Google and Baidu to integrate AI models into iOS 18.

AI features that require less processing power will run entirely on the device, but more demanding tools will operate through the cloud. Apple appears to be touting the privacy advantages of this plan. Let's wait and see what the results are?
