

What are Bluetooth headphones? Top 5 best Bluetooth headsets

What is a Bluetooth headset? A wireless headset capable of remotely connecting to commonly used electronic devices today. Let's find out with TipsMake

Bluetooth headsets are gradually becoming more interested and chosen by many people because of their compact, trendy and convenient design. Bluetooth headphones are also considered an indispensable technology product for many people. So what is a bluetooth headset? What outstanding features does it have that 'captures' the love of so many people? Join TipsMake to find out in the article below the top 5 best Bluetooth headsets today.

What are Bluetooth headphones?

Bluetooth headphones are a line of wireless headphones that can connect to computers or mobile devices that are commonly used today. There are many types of headphones such as **on-ear bluetooth headphones** (located inside the ear), **in-ear bluetooth headphones** (above the ear), or maybe **over-ear bluetooth headphones** (over the ear).

With the development of technology, bluetooth headsets are increasingly upgraded and can overcome disadvantages such as broken connections, longer connection range, more vivid sound, etc. Product features increasingly useful and meets users' wishes.

What are some criteria for choosing a Bluetooth headset?

Choosing a Bluetooth headset when playing games will not be simple, especially for gamers. Below are 5 criteria for choosing Bluetooth gaming headsets that we want to share with you. Let's learn to make the right decision when buying any wireless headphone product.

1. Price

To choose a Bluetooth headset, first of all, in terms of price, surely expensive product lines will have better quality than popular product lines, right? But if your financial ability is limited, you should still prioritize choosing bluetooth headset products with average prices to suit your budget.

However, evaluating the price alone is not enough, you should also evaluate the battery life and sound quality of the headphones.

Battery life

For gamers, if during a fight the connection is interrupted, that's bad, right? However, this problem only occurs with non-genuine headphones. Because the actual battery capacity that the headset provides is not standard, or it may be a virtual parameter that confuses users. Therefore, when choosing a Bluetooth headset, you should choose genuine products with a battery capacity of 5-7 hours to avoid disconnection mid-game.

Designs

For gamers, everyone certainly wants to experience good quality products with neatness, avoiding clutter because it will greatly affect the playing process. Therefore, the in-ear Bluetooth headset product line will be the perfect choice. The design fits tightly around the ear, providing the most comfort to the user. Along with that is the support to prevent unwanted noise from the outside environment.

Delay

Regarding the delay of bluetooth headphones, most people who experience the product do not expect to encounter this problem, not just gamers. Therefore, when choosing a wireless headset product, delay is an important factor you should choose to evaluate carefully.

When choosing a bluetooth headset, you should choose a product with as low a delay as possible. Because the lower the product, the better and faster it will be able to process sound in the game.

Sound quality

When choosing a Bluetooth headset for gamers, you must definitely choose the sound quality carefully. This is also the deciding criterion for choosing any type of headphone. The selected sound quality must be honest, clear and prioritize support for modern audio technology, with the bass range reproducing bass.

Because this will help you play better in your match. The sounds of distant gunfire, explosions, and footsteps can be clearly heard. Powerful, not dazzling, not noisy sound brings a better experience to users.

What is the classification of Bluetooth headsets?

Bluetooth headsets are divided into two types: devices worn in one ear and devices that support both ears.

1. As for the mono side-worn device: this is a bluetooth headset product line that usually only supports calls with the advantage of compact, fashionable and stylish design.
2. Stereo headphones that support both sides are divided into 3 main lines such as: In-ear, on-ear, over-ear.

In-ear bluetooth headset

In-ear Bluetooth headphones are also known as **Earbud headphones** . These are compact headphones that sit in the ear canal or on the outer ear. The headphones are designed according to modern trends, the buds, or wings, or small fins can fit tightly to the ear, keeping the headphones sturdy and safe for the user.

Advantage

1. Compact and super light.
2. Integrated microphone and voice navigation.
3. Noise insulation from moderate to absolute level.
4. Does not cause entanglement.

Defect

1. The reverberation and bass cannot be compared with full headphones.
2. Causes discomfort when used for a long time.
3. Many models are difficult to fit the ear.
4. Not suitable for office use.
5. Dual cord design makes it easy to tangle.

Picture 4 of What are Bluetooth headphones? Top 5 best Bluetooth headsets

On-ear Bluetooth headset

On-ear Bluetooth headphones are headphones that usually sit above the user's ears with better sound isolation than in-ear headphones. On-ear headphones are often used in offices or public places.

Advantage

1. Compact.
2. Limit burning ears.
3. Foldable for easy transport.

Defect

1. Noise isolation is worse than over-ear lines.
2. Bass is rated lower than over-ear.
3. Noise easily enters the headphones.

Over-ear Bluetooth Headphones

Over-ear Bluetooth headphones or over- **the-head Bluetooth headphones** are headphones that completely cover the user's ears due to their large housing size, making them good soundproof headphones. However, this headphone model is quite bulky so it is not suitable to carry everywhere, should only be used in the office or at home.

Advantage

1. The sound is usually pretty great at maximum volume.
2. Earcups create loud sound.
3. Surround sound helps block outside noise well.

Defect

1. Difficult to move.
2. Sealing causes burning in the ears.
3. Gets tangled in glasses or hair.

Should I buy a wireless or traditional Bluetooth headset?

Currently, smartphone product lines are gradually trending towards removing the headphone jack. Therefore, Bluetooth headset product lines are gradually becoming more popular and more popular than wired headsets. In addition, with optimal and convenient advantages, wireless headphones are always more popular than traditional headphones because:

Flexible connection

Wireless Bluetooth headset product lines can connect more flexibly than traditional headphones without having to use a jack or any operating system. In addition, the wireless headset also has the ability to automatically reconnect to the device without having to perform complicated connection procedures. You can completely connect to your phone when outside and to your computer when at home easily.

Smart control

Wired headset products must still be equipped with play-pause controls and volume up and down controls. As for wireless Bluetooth headphones, you can customize them by swiping the touch or swiping motion. Some lines also integrate the function of receiving commands to refuse or receive calls, pause music playback, etc.

Picture 7 of What are Bluetooth headphones? Top 5 best Bluetooth headsets

Stable conversation feature

Bluetooth wireless headphones are all integrated with microphones so users can easily make calls.

Long battery life

Bluetooth wireless headphones have long-lasting and stable battery life. With Over-ear headphones, battery life is up to 10-15 hours. As for completely wireless headphones, the battery life is from 3.5 - 4.5 hours.

Effective waterproof and impact resistance

All wireless Bluetooth headsets have waterproof and shockproof standards, suitable for the need to use headphones when doing sports, moving outdoors or people who often sweat.

Good noise canceling ability

The Bluetooth headset possesses a compact design but also adds smart noise canceling features to help users enjoy a clear experience without being affected by outside noise.

Strong sound quality

The sound quality of Bluetooth headphones is considered sharper than traditional headphones.
