

What are the advantages of IPL hair removal machine, safe use?

Hair removal technology IPL technology is very trusted by women to remove hair at home, ensuring safety, not causing pain, not hurting the skin.

Today hair removal with IPL technology is not only used by the Spa centers but this technology has been applied by Beurer, Rio, and Philips to produce a home hair removal machine.

IPL hair removal machine for permanent hair removal is very effective and safe. Now let's go and learn more about this IPL technology hair removal machine.

What is IPL hair removal technology?

IPL is a high-intensity pulse of light that can penetrate through the skin layers to reach the root of hair follicles, destroying the hair's source of life, causing the hair to slow down and be permanently destroyed. This light pulse will not affect the skin, resulting in very high root hair removal effect.

With high permanent hair removal ability, IPL hair removal technology is trusted by medical clinicians and estheticians.

Advantages of IPL hair removal technology

Compared with intelligent hair removal technology Diode Laser (cold heat semiconductor), hair removal by hair removal technology IPL technology has many advantages:

High safety: IPL technology helps you not only remove hair from skin of hands and feet, but also can remove sensitive areas like face, armpit and bikini area without hurting skin.

Does not cause skin irritation: High intensity pulses only destroy hair follicles without affecting the skin, causing no irritation or redness to the skin.

Long-lasting effect: Some methods to remove hair immediately like waxing, hair removal creams will hurt the skin, causing pain, but also make the hair quickly grow back and become harder and denser. But hair removal by IPL hair removal machine will have long lasting and permanent hair removal effect, sparse and lighter hair.

There are almost no side effects: There is no evidence that the side effects of IPL hair removal machine, so users can feel secure to use.

Treatment for a variety of subjects: IPL hair removal machine can remove hard hair, soft hair, short hair, long hair by using light wavelength that can be adjusted with intensity. Therefore, the machine can remove hair for both men and women.
