

# What could be the problem with my laptop not turning it on? How can I fix it?

What could be wrong with my laptop if it won't turn on? How can I fix it? This is a question TipsMake has received frequently lately. To find out the cause and how to fix this problem, please continue reading the article below.

This article from TipsMake will answer your question: What's wrong **with my laptop** if it won't turn on? How to fix it? Additionally, you can refer to other articles on TipsMake to learn more about how to fix common laptop keyboard problems.

How to fix a laptop that won't turn on or display anything.

## *What could be wrong with my laptop if it won't turn on?*

The reasons why a laptop might not turn on or start up could be due to a dead battery, a faulty power supply, a damaged charging cable, or even hardware errors, software conflicts, etc.

***Method 1: Plug in the laptop charger.***

As TipsMake mentioned above, the reason why a laptop won't turn on could be due to a dead battery. Try plugging in the laptop charger and turning it on again to see if the device powers on and starts up.

Additionally, check the charging port to see if it's loose, whether there's power, and if the laptop is charging.

***Method 2: Remove the battery and reinsert it.***

**Note:** Some laptop models have non-removable batteries, so this method only applies if your laptop uses a removable battery.

Another way to fix a laptop that won't turn on or boot up is to try removing the battery and waiting a few minutes, then putting it back in. Next, plug in the power cord and turn on the laptop to see if it boots up.

***Method 3: Discharge the laptop battery.***

In some cases, completely discharging the laptop battery can also fix the problem of the laptop not turning on. Additionally, properly discharging the laptop battery can help extend the battery's lifespan.

*Step 1:* Unplug the power cord and remove the laptop battery.

*Step 2:* Press and hold **the Power button** for about 30 seconds to discharge the remaining battery power.

*Step 3:* Next, plug the laptop charger back in.

*Step 4 :* Press **the Power button** to turn the laptop back on.

*Step 5 :* If the laptop starts up normally, shut it down as usual.

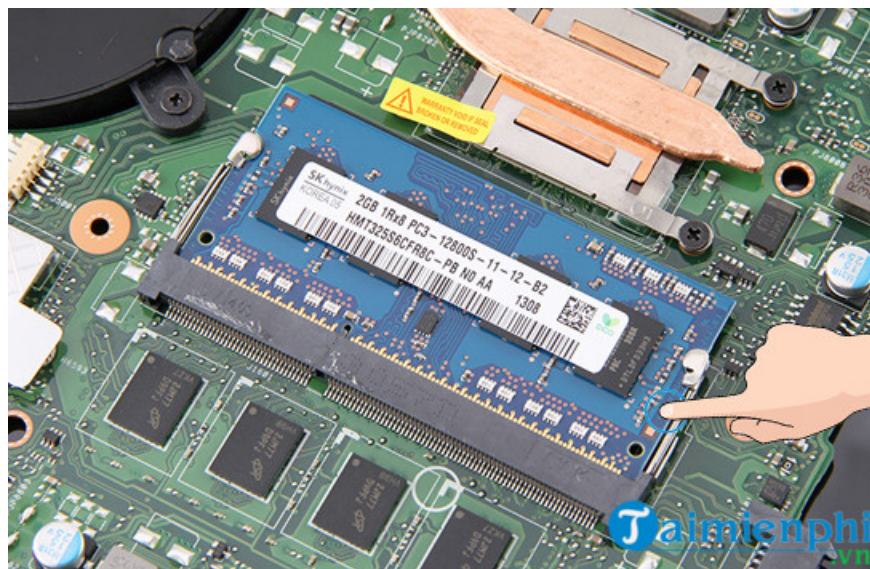

*Step 6 :* After the laptop is completely off, the next step is to reinsert the battery.

*Step 7:* Finally, turn the laptop back on and check if it starts up normally.

**Note:** If the above method doesn't work, repeat the steps but press and hold the Power button for about 1 minute or longer.

#### ***Method 4: Related to hardware***

Finally, if you've tried everything and your laptop still won't power on or boot up, the culprit in this case is likely a hardware issue. This could involve faulty or damaged hardware components such as the motherboard or processor.

If the problem stems from hardware issues, your ultimate solution is to replace the hardware to fix the laptop.

It's best to take your laptop to a reputable repair center, or if it's still under warranty, you can take it to the store for assistance.
