

# What equipment should be equipped for the family in humid days?

Humid weather is very easy for young children and the elderly to suffer from respiratory diseases. So we can choose some equipment for the humid days.

The weather in the spring these days often increases humidity, drizzle makes the house not to be dry and there is a 'sweat' situation on the walls, floors or even refrigerators. This is very easy for young children, the elderly, people with other weak conditions suffer from a number of respiratory diseases when the air in the room is not airy. If so, families can prepare some familiar electronic devices to overcome this humid weather.

## 1. Air purifier

When it is wet and humid, the air quality also decreases. Indoor space is also not airy and always feel moist. The air purifier purifies the room air through a standard dust filter, removing harmful dirt, mold-causing bacteria and odors. This helps the air in the room clean, healthier, good for the health of the elderly and young children.

Currently, there are many types of air purifiers integrated with some additional features such as dehumidification, mold removal, odor, mosquito repellent .

## 2. Clothes dryer

Washing clothes in this humid weather cannot be as dry and fragrant as washing in hot or dry weather. Even if you wash in a washing machine, it is not as satisfactory. For families with many or young children, it is advisable to prepare a dryer, or clothes dryer to help clothes dry faster, without odors. The dryer also has the ability to kill bacteria to help clothes dry, clean, prevent disease.

Currently there are many types of dryers with different capacities for you to choose suitable for each family. If possible, you should also consider some types of washing machines with drying mode such as washing machine with drying Electrolux EWW12853VN, Electrolux EWW14023, .

### 3. Air conditioning

Normally people think only to turn on the air conditioner when it is hot, but few people know that air conditioner also has a regime to reduce humidity in the room. When the Dry mode is turned on, the air in the room is improved, dehumidifying effectively, but it does not consume electricity. We adjust the air conditioner lower than the room temperature by about 2 degrees, not to higher because it will make the room more humid. Dry mode on the air conditioner has a water drop icon, so turn 1-2 times to be effective.
