

What extensions are no longer working on FireFox 'fire fox' 57?

Firefox has long been a browser for power users thanks to a small part of the extension library. These powerful add-ons allow creative developers to adjust their browsers in great ways, but 'that power' also reveals problems.

Firefox has long been a browser for power users thanks to a small part of the extension library. These powerful add-ons allow creative developers to adjust their browsers in great ways, but 'that power' also reveals problems.

For a long time, Firefox's add-on system found that a bad extension could cause problems in your browser.

To fix this, Firefox 57 browser is making a big switch. From this version, Firefox will use the same add-ons as Chrome uses, they cannot modify the browser code, so it is less dangerous.

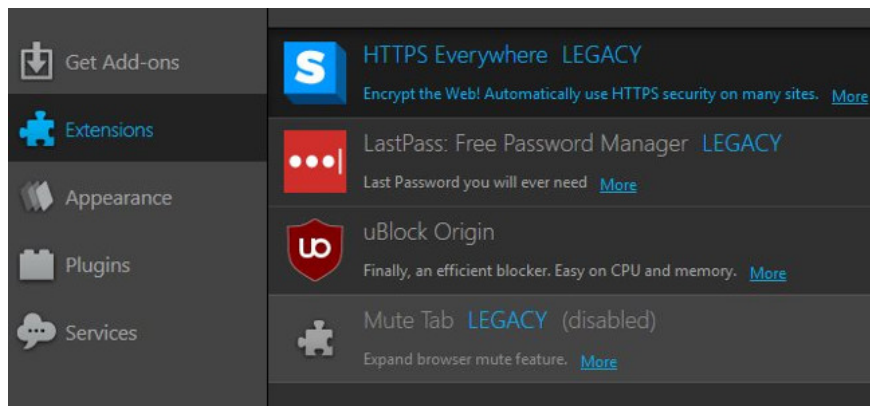

1. How to install the Chrome utility for Firefox
2. Warning: List of extensions, dangerous browser addon, user "spy"

The old extensions will be called **Legacy** and will not be supported in Firefox 57. You should check now to see which of your extensions are on the path of 'extinction' to be able to plan ahead.

First, make sure your browser is up to date by clicking on the three-bar menu icon at the top right of Firefox. Click on the **help** icon, then select **About Firefox** to check for updates. You must have a browser version of Firefox 55 or later to receive warnings about old extensions.

Once you're done, go to **Menu> Add-on** and select the **Extensions** tab on the left. Any extension that appears **LEGACY** means they do not conform to the new standard. Mozilla has announced that in November, it will propose "appropriate replacement" for the updated updates.

But you can start now.

Check out the arewewebextensionsyet.com website for information about whether your favorite extension developers have updated them.

If you need an alternative to a program that doesn't do the conversion, check out this **Google Sheet** table that the Firefox Reddit community has compiled. It lists the status of add-ons and provides alternatives if possible.

Hopefully this will not affect your use of Firefox too much. Most large extension providers have no problems when they "modernize" their services, while extensions that have not been updated for a while may be permanently removed after this change. But in the long run, it will make Firefox more stable and secure.

How many Firefox extensions have you installed and how many of them are old add-ons?
