

What happens inside the gun when we pull the trigger?

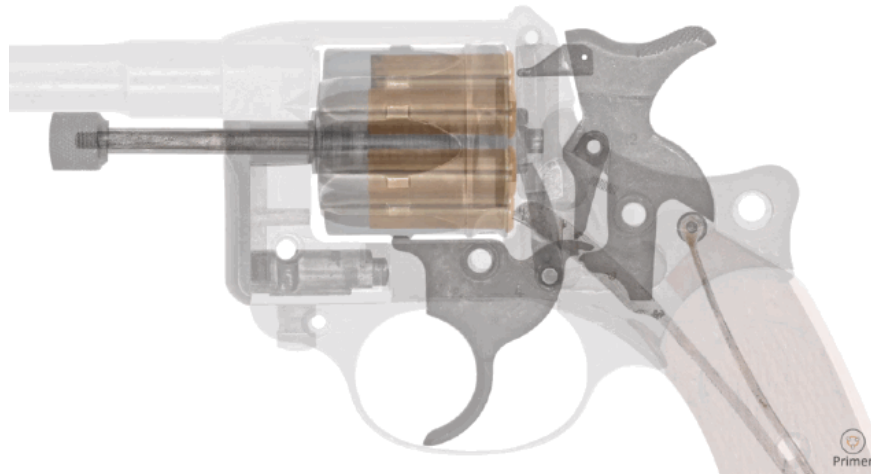

The images of how some of the guns used in World War I (CTTG) below will help us know what happens inside the gun when it is pulled.

Guns, quite popular weapons that most of us have ever seen in movies, but the way they operate is still a mystery to many people.

1. What horrible thing happens when the body is hit by a bullet?
2. The impressive moment when the bullet rushed out of the barrel
3. Do bullets fire?

The images of how some of the guns used in World War I (CTTG) below will help us know what happens inside the gun when it is pulled.

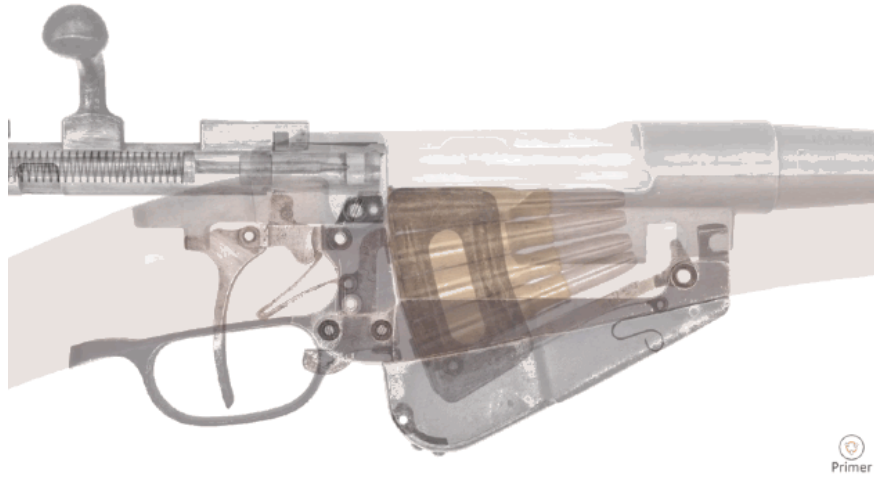

1. Six-type revolver pistol French Ordnance

This is one of the most popular pistols of the French army in CTTGI, born in 1892 and has a range of damage of about 25 - 75m.

This revolver is designed with each drive a combustion chamber, fired with a hammer to knock out the bullet.

2. Berthier Mle rifle.16

This is a single-shot gun (bolt-action), it must be loaded after each shot so it is relatively inconvenient compared to today's semi-automatic guns.

The Berthier Mle.16 rifle has a magazine containing 3 capsules (not included on the barrel), the bullet is quite accurate due to the inner lock.

3. Mauser 1914 semi-automatic pistol

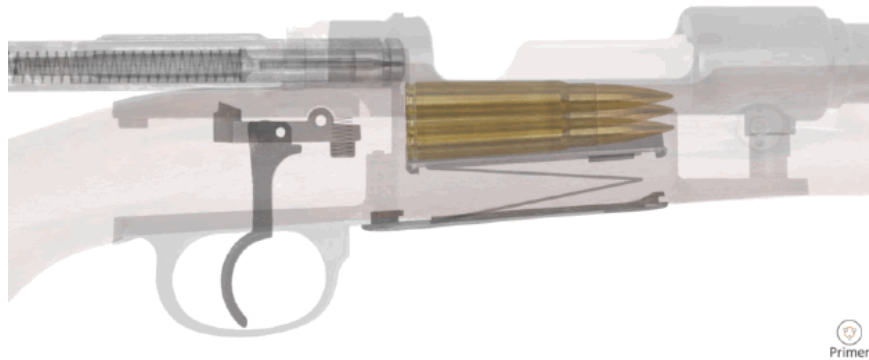

This gun was built by a German gun manufacturer, Mauser, in 1914. It used a slider to fire. Although not as strong as a revolver, this semi-automatic gun has 8 rounds of ammunition and is much faster.

4. Pistol 8 tablets F.Langenhahn Selbstlader

This pistol was put into the field in 1915 and used very much by the German army. This semi-automatic pistol has a principle that works almost like the Mauser revolver, except that it uses a hammer to fire rather than a slider.

5. Mauser 1898 5-rifle rifle

The rifle built by Mauser in 1898 was the first rifle used by the German army during two world wars.

Mauser rifle 1898 works just like a Berthier, a barrel lock and bullets after every shot.
