

What happens when pouring vinegar into the toilet?

Let's TipsMake.com find out what happens when pouring vinegar into the toilet!

1. 21 great tips for cooks
2. 7 cleaning products should never be mixed together
3. 9 great home cleaning techniques save time

People often try to keep their homes clean, especially in places where our bodies are easily invaded by bacteria. Detergents and disinfectants are not always able to remove bacteria, so it is helpful to know more about other methods that can help you get the best results.

On the Bright Side page, a simple yet effective way to help your bathroom is clean and safe is found. Let's TipsMake.com find out **what happens when pouring vinegar into the toilet !**

What do you need to do?

To clean dirt from the outside and disinfect the toilet with vinegar, you need:

1. A cup of vinegar.
2. Baking soda or iodine solution.

Use more soda (to increase efficiency):

Heat the vinegar at 40 degrees Celsius, then mix vinegar with soda (iodine solution). For 200g vinegar, you will need a tablespoon of soda. If using iodine solution, use 1: 1 ratio. Then pour that mixture into the toilet bowl and leave it for a few hours. Better yet, you should do this in the evening to make sure no one uses the toilet. If the result is not as expected, you can repeat this process several times.

Do not use additional soda:

First, drain the water in the toilet tank and close the faucet. Use a dry cloth to wipe the inside of the tank and use a cloth with vinegar solution to fill the stain area. After about 2-6 hours, you can clean stains by shaving (*not using metal*).

What kind of vinegar should I use?

1. Dissolve lime.
2. Clean metal parts from rust.
3. Self-evaporating and **eliminating unpleasant odors**.
4. Killing **shigella bacillus** (*causing diarrhea*) and **E.coli** (*colon bacteria*).
