

# What horrible thing will happen to the Earth if the frogs become extinct?

If the species of frog extinct, humans, nature, ecosystems, etc., will be affected on Earth? The answer is yes, even the disasters that happen will be bigger than what you can imagine a lot.

If the species of frog extinct, humans, nature, ecosystems, etc., will be affected on Earth? The answer is yes, even the disasters that happen will be bigger than what you can imagine a lot.

What is that? Find out about the importance of this small animal.

First of all, it affects something very close and familiar to us. These are great delicious dishes made from frogs such as frog hotpot, roasted frog with salt, and fried frog with bamboo shoots will definitely no longer exist. This is obviously a sadness that is not mild for those who love these dishes, and is a great loss to the culinary culture of mankind.

You must have practiced frog surgery in biological biology when at school. So, if frogs are gone, what do students and students take to practice.

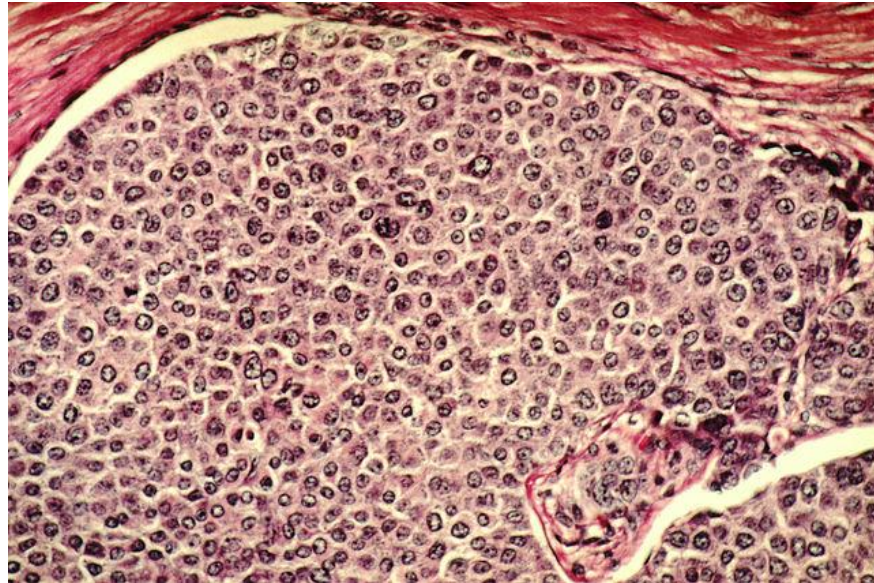

In the natural food chain, since it was tadpole until adulthood, frogs are an important source of food for many other animals. Therefore, if the frog disappears, it will cause a chain reaction in nature.

Besides, frogs are also an insect killer. Extinct frogs mean that the number of insects can increase exponentially.

Not only that, the extinction of frogs also causes incalculable hazards for people and nature.

Currently, people are using many types of vaccines made from frogs. At the same time, they are also the animals used to test many new vaccines. Without frogs, humans will face many dangerous diseases without cure.

Tadpoles that eat algae contribute significantly to water purification. Ecosystems will be severely imbalanced without tadpoles.

Plants absorb CO<sub>2</sub> and release oxygen, but trees will not survive if there are too many insects. Frogs as one of the most "productive" insectivores will ensure the development of nature as well as prevent greenhouse gas emissions by protecting the vegetation from the attack of insects. coincide.

In short, every species that lives on this Earth has a certain role and the disappearance of any species will cause an imbalance in nature.
