6. Note to use the heating bag properly?

What is a heating bag?

Heating bags are products with heating function, commonly used in the winter or when the temperature drops at night, early in the morning . Heating bags are also known with many other names such as **holding bags heat** , **hot packs**, **versatile packs** .

What types of heating bags are there?

On the market today there are many different models of heating bags but in general, these products are divided into 2 groups: **electric heating bags** and **non-electric heating bags** .

Electric heating bag

Electric heating bag is a type of heating bag composed of: Airtight inner pocket containing heat-storing solution, heating element, self-disconnecting relay, air exhaust, power jack.

The solution in a thermostatic bag is a liquid with a composition of water, salt and chemicals that have a high thermal capacity. When plugged in, the heater heats the solution inside the bag. When the temperature of the liquid reaches about 70 degrees Celsius, the relay will disconnect itself.

Plugged hot compresses often have air exhaust pipes to limit the formation of air inside the bag, preventing the bag from exploding or breaking due to increased pressure when the temperature in the bag is high. In addition, this type of heating bag also often has two layers, the inside is PVC layer, the outer layer is a cloth to avoid leaking the heat-keeping solution, making heating more efficient and safer.

Samples of heating bags on the market are extremely diverse.

Non-electric heating bag

Non-electric heating bags compared to electric heating bags have a simpler structure:

1. For **hot water heating bags** : The structure is like an empty bag and when you need to heat, you just put hot water inside the bag.
2. With the type of **bag using a microwave** : There is a structure inside an bag with heat-keeping gel, heat-keeping solution, grape seeds . When you need heating, put the bag into the microwave to heat the bag. If the inside of the bag is a gel to keep the heat, the solution holds heat, you can also soak the bag in hot water to heat the bag.

Is heating bag safe?

When learning about heating products, there is a question that many people ask is whether heating bags are safe, toxic or not?

In fact, most types of heating bags that come with a heat retention solution and an internal heat-keeping gel have a two-layer bag structure to prevent liquid, which gels leak out. In addition, electric heating bag is also equipped with additional safety mechanisms such as air exhaust, relay disconnected to avoid broken or exploding bags. So, if you choose to buy products from reputable brands, you can be assured of the quality of heating bags.

In addition, due to the fact that the products have heat during use and must use electricity or use with hot water, you should also pay attention to ensure compliance with safety rules about electricity, safety on charging, and safe use of hot water to avoid unfortunate incidents.

Heating bag has heating, pain relief effectively.

What are the heating bags used for?

When purchasing a quality heating bag and ensuring the correct use of the product, heating bags can bring many benefits to users such as:

1. Efficient heating helps in cold weather.
2. Helps circulate blood, thereby reducing aches and pains.
3. Help reduce menstrual pain for women.
4. Support reducing belly fat for postpartum women.
5. Many versatile heating bags can be used as hot compresses, and can be used as cold compresses, so they can be used for flexible pain relief depending on the type of pain or injury.
6. Currently, many types of heat-keeping bags also have scents such as mugwort, red ginseng, and herbal incense to help increase the therapeutic effect and relax the user better.

Hot water heater only needs hot water to be used.

Experience of choosing which kind of heating bag is good?

On the market today, there are many types of heating bags, which are rich in styles, designs, with large and small sizes, with many different design patterns . to meet the diverse needs of users. . To be able to choose to buy a good heating bag, there are a few points that you will need to note the following:

1. Usually electric heating bags will have a long warm time from 4-6 hours, can be used in any location and you will have to be careful about electricity when using. Non-electric heating bags have a shorter warm-up time of only 2-3 hours and you will have to prepare hot water or wait for the microwave to warm the bag. Therefore, you should base on the practical needs to choose the type of electric heater plug or not plug the best.
2. The price of heating bags is also extremely diverse, some types are only around VND 100,000, some can be up to VND 700, 800 thousand depending on the size, material and brand of production. Therefore, you should also consider your needs to choose the right product with the most affordable price.
3. Should choose to buy heating bags of reputable brands such as Fashy, Thien Thanh, Sunflower, Mediton, Microlife, Taiwan Stanch . from reliable addresses to ensure the best product quality. You absolutely should not buy cheap heating bags of unknown origin, to avoid products made from unsafe materials, which can cause leaks to keep heat, hot water when using, even more dangerous is to lead to explosion, broken heating bag.

Note to use the heating bag properly?

In the process of using a heating bag, in addition to following the instructions of the manufacturer, there are a few notes that you should not ignore to ensure the use of a heating bag properly and safely:

1. With electric heating bags: Never charge and use the product at all times, and ensure proper charging.
2. For non-electric heating bags: Care should be taken when pouring hot water into the bag or when submerging the bag in hot water, heating the bag with a microwave; Do not use boiling hot water to heat a bag; Do not heat the bag for too long.
3. It is important to check the temperature of the heating bag before use, to avoid scalding due to overheating.
4. Absolutely do not allow sharp objects to cut on the surface of the bag or tear the bag.
5. With the type of heating bag with liquid, gel to keep the inside, you absolutely must not arbitrarily change the water in the bag and should regularly check whether the bag is leaking, damaged or not, if so, you should not Keep using and should not repair the product yourself.
6. Keep the bag out of the reach of children.
7. Do not use harsh chemicals to clean the heating bag.
8. The heating bag should be kept in a cool and dry place, away from heat, high humidity, avoiding sunlight, avoiding sharp objects, avoiding flammable substances .

Hopefully the above information has helped you to better understand the heating bag, how to choose a quality heating bag as well as good experiences to use safe heating bags to effectively cope with the cold weather.
