Hoods are no longer strange to families, because of their durable performance and efficiency in use, helping the kitchen space become more pleasant after cooking. So, what is a hood and what kind of hoods are there? Please refer to the article below to better understand.

## Hood hood concept

Hood is a type of machine used in the family kitchen, restaurant . with structure consisting of a suction hood, a twin / single turbine engine or exhaust fan. Filter net is usually made of aluminum or stainless steel with different thickness, along with the control panel can be a button or touch to help you set the operation mode for the machine.

Depending on your family's kitchen design, you should use activated carbon or take pipes to suck and deodorize. A simple removable filter element makes it easy to clean the machine after use.
