

What is a webcam? Where is the best place to buy a genuine webcam?

What is a webcam? What is a laptop webcam and what is a webcam used for? Let's find the answers to your questions and choose the most suitable webcam product for you with HACOM!

Nowadays, Webcam is an indispensable technological device in life. With the extremely high-quality online video chat feature, the device brings extremely interesting experiences that you cannot imagine.

Let's explore with TipsMake more about **what a Webcam is**, what a laptop webcam is, and what a webcam is used for through the following article to find the most suitable device for yourself after reading this article!

What is a webcam?

Webcam, abbreviated as WC, is a compound word of Website camera, which refers to digital recording devices connected to a computer to directly transmit the images it records to another device via the internet network system.

Simply put, **a webcam** is like a digital camera with the function of recording images, but the only difference is that its main function is controlled and processed by software on the computer. This device is very popular and is integrated (or can be purchased) on most current technology devices such as laptops, phones and even smart TVs.

The data captured by the webcam will be saved to the computer, used as a visual communication device between people. In addition, the webcam is also used for security work, for example, transmitting the images it records to a remote control center.

What is a webcam used for?

The question that many people are interested in is what a webcam is used for. Some uses of a webcam include:

Call online

Online calling or Video calling on laptop is an extremely convenient feature.

When you make a video call, your webcam captures your image and the other person's as you chat over the Internet. This allows you to see each other's images, making it feel like you're talking face-to-face.

Video calling with webcam is completely free. You can connect with your friends through tools such as: Facebook Messenger, Skype, Zalo,.

Facial recognition

Webcams are used as facial recognition systems at airports and train stations to enhance regional and national security. You can also set this mode to secure your computer and other personal devices.

Game support

Some 3D games today are integrated with webcams. Or realistic games, the webcam has the function of recognizing and transmitting data to the computer to support your participation in the game will be more interesting and realistic.

Read barcodes

Reading barcodes and QR codes quickly via webcam greatly supports product identification and online payments.

Optical character recognition

With handwriting, typed or printed text can be converted into word documents on the computer using only a webcam through related support software. Your text processing time is also saved from there and helps to store information better.

Types of webcams

Integration

Many laptops and other computers are specially designed with a built-in webcam located at the top of the computer screen. However, these devices provide lower quality images. However, they are still capable of live video calls. Many devices have dual cameras, one for taking photos and one for video calls. Built-in cameras provide greater convenience and reduce the clutter of too many peripherals.

Independence

Standalone webcams connect to your computer via a USB port. The camera design consists of a lens and a stand or clip. To connect to your computer, older webcams may use a serial port connector or other data transmission methods. Users can choose a high-quality camera and microphone or headset according to their needs.

Network camera

Network cameras are just like regular webcams, the difference is that they transmit their data over Ethernet or wireless connections. Compared to regular webcams, network cameras are more suitable for high-end video conferencing setups. Network cameras are also less expensive than webcams, but they require high-speed network connections to function properly.

Webcam with microphone

The need for a standalone microphone or headset is reduced by separate webcams as they come with a built-in microphone. You can simply choose to use the webcam microphone with a headset.

Notes when using Webcam

Besides learning what a laptop webcam is and what it is used for, you also need to pay attention to how to use the webcam to ensure the product's longevity.

1. Webcams do not have security features, so hackers can break in and control them to monitor your images.
2. Even if your computer is hacked while it is connected to a microphone, the hacker can both see and hear your every move.
3. Therefore, after not using it, disconnect to limit the situation of being tracked and having your data and confidential information stolen, affecting your personal privacy.
