This is software that helps users easily access computers using operating systems: macOS, Windows, Ubuntu,. In particular, AnyDesk can also be used on mobile devices with operating systems. operating Android, iOS.

Another factor that makes this software chosen by many users is that there are 4 support versions, including: Free (free), Lite (shortened), Professional (professional) and Enterprise (enterprise). .

## AnyDesk's outstanding features

The reason this software receives a lot of popularity from users is because it brings many outstanding features. **AnyDesk** is not only simply a software to help control computers remotely, but also has many superior features. AnyDesk's outstanding features are:

1. Users can use the software completely free of charge.
2. When using this software, geographical distance will not affect your work. With AnyDesk you can control your computer remotely, as long as your computer has an internet connection.
3. Fast response time, so users will not be interrupted when performing operations and controlling the computer remotely.
4. The security of the software is very high, ensuring safety and security when you connect the software. AnyDesk will encrypt information to best secure the IP address.
5. The software is optimally designed, with a light capacity so you can store the software on USB. At the same time, operation is also smoother.

## Differences between AnyDesk and TeamViewer

TeamViewer and AnyDesk are currently the two most commonly used remote computer control software. So, what is the difference between AnyDesk and TeamViewer?

### TeamViewer software

**TeamViewer** is a software that helps users perform remote computer control operations quickly. However, after using it for a period of time, users need to purchase a license to continue using it. Users are required to pay a fee to continue using it.

### AnyDesk software

The main function of **AnyDesk software** is also to help users connect and control computers remotely. This software allows users to use it completely free of charge, without any additional costs.

Furthermore, when using AnyDesk, you just need to download it to your computer and use it, no need to install any other applications. The usage time of this software is also much longer than TeamViewer, **there is no need to spend money** to buy and install the software.

Regarding the interface, AnyDesk has an interface that is not as eye-catching as TeamViewer, but is also very user-friendly. The software is designed similar to a web browser window, so all operations will become simpler.

However, AnyDesk also has a major drawback: the software capacity is too low, sometimes affecting remote computer control.

## Instructions for installing AnyDesk on Windows

**Step 1:** Download AnyDesk software for computers at: <https://anydesk.com/en/downloads/windows>.

**Step 2:** Then, click **Download Now** .
