

What is Apple Intelligence?

Apple Intelligence (also abbreviated as AI) is an artificial intelligence (AI) system developed by Apple specifically for its devices including iPhone, iPad and Mac.

This is a combination of device-generated and server-powered AI models to suit each user's usage context, while still ensuring data privacy and security are maintained. Deep integration into the platform makes it possible for AI to be used anywhere instead of having to access a separate application.

CEO Tim Cook speaking at WWDC said, Apple Intelligence understands you and is based on your personal context. It is built to ensure privacy is a top priority. It is personal intelligence and goes beyond artificial intelligence.

Apple Intelligence is deeply integrated by the company into the iOS 18, iPadOS 18 and macOS Sequoia operating system platforms, supporting chips from the A17 Pro and M Series chips.

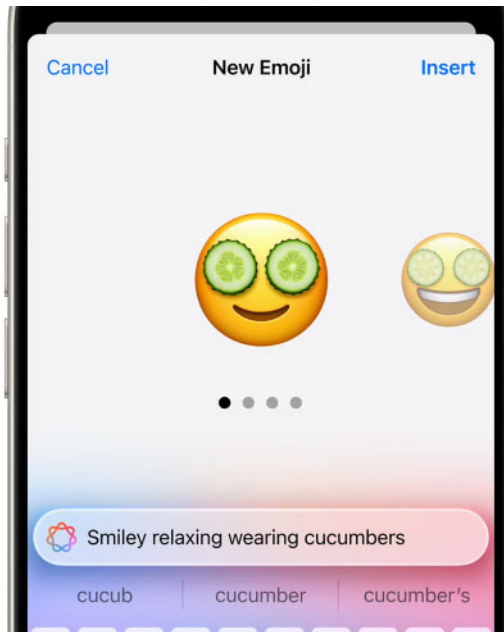

In addition, Apple also announced Private Cloud Compute, a server infrastructure system used to run more complex, more powerful AI models that can process user data without giving up any resources. any privacy.

Some outstanding features of Apple Intelligence

Writing Tools : Supports users to write, check or change text anywhere such as Mail, Notes, Pages and third-party applications.

Image Playground : Create fun images in seconds in different styles to send messages or notes.

Genmoji : Supports users to create unique emoticons to add to messages to express themselves.

Apple Intelligence also brings the biggest update to date to the Siri virtual assistant since its launch more than a decade ago. The Siri icon on iOS is changed, with a blue border that glows around the home screen when in use. Siri is no longer just a voice interface but also has the ability to enter queries directly into the system to access generative AI-based artificial intelligence.

Apple also integrates ChatGPT into experiences within its operating systems including iOS 18, iPadOS 18 and macOS Sequoia, allowing users to use it to create content, images and ask questions without switching. many tools.

List of devices that support Apple Intelligence

Apple Intelligence will be deployed on the latest operating system versions, including iOS 18, iPadOS 18, macOS Sequoia and visionOS 2. This AI is available for free, but is only available in English.

Devices that support Apple Intelligence include:

1. iPhone 15 Pro and iPhone 15 Pro Max

2. iMac M1 or newer
3. Mac mini M1 or newer
4. MacBook Air M1 or newer
5. MacBook Pro M1 or newer
6. Mac Studio M1 Max or newer
7. Mac Pro M2 Ultra or newer
8. iPad Air M1 or newer
9. iPad Pro M1 or newer
