Jailbreaking is the process of removing software barriers imposed by Apple on iOS, tvOS, and IpadOS.

How Jailbreak works is to use a series of kernel patches, allowing root access to the iOS system. After jailbreak, you can download and install additional apps, extensions, and customize the iOS look and feel in a variety of ways, and even change the icons of the apps, making it look like is and is more interesting than ever.

### Should Jailbreak the phone?

In the personal opinion of a regular Jailbreaker like me, the answer is **no** . Simply put, Apple is doing better and better at their job, iOS and IPAD OS are now extremely optimized for the user experience.

Previously to be able to turn on / off mobile networks, we always had to go to settings -> mobile network off, very inconvenient, Jailbreak solved that by adding the mobile network switch to the control center. . Not to mention the copy must also use a new Jailbreak can do.

Now that iOS and IPad OS are much more mature, most of the features that were previously required to be jailbroken can be done by current pure iOS. And a lot of reasons why we should not jailbreak, including that very important "security" feature, are lost when we do this.

Of course there are still tricks and tricks that can only be done by jailbreaking. So if you still want to jailbreak your phone, here will be the easiest ways anyone can do it.

## 2. Jailbreak by computer
